Event Operations Command Platform

Platform Focus & Priorities

Product clarification — authoritative scope

Version 1.0 · 6 June 2026 · Approved

What Olasentra Is

Olasentra is the leading Event Operations Command Platform for event staffing, workforce operations, and live event management — not a equipment rental or asset-hire business.

Platform Focus (In Scope)

Domain	Description
Event Staffing	Registration, roster, roles, approval workflows
Workforce Operations	Staff directory, profiles, PSA compliance, onboarding
Event Management	Events, venues, timelines, capacity, go-live
Attendance	Check-in, sign-in tokens, geo validation, work hours
Compliance	PSA licence, audit log, blacklist, privacy consent
Messaging	Admin ↔ staff inbox, broadcasts, notifications
Payroll	Work hours, apply-site payroll bridge, exports
Invoicing	Commission invoices, job records, personal invoices
Client Portal	Client-facing event visibility (future subdomain)
Operations Intelligence	Auto-approval, trust scores, readiness, AI ops assistant

Explicitly Out of Scope

Equipment Rental — removed from roadmap. Olasentra is *not* an equipment rental platform. No development effort on rental workflows unless explicitly approved in a future gate.

- **Removed from planning:** Phase 23 Equipment Rental Module
- **Tables not to be built upon:** `equipment_categories`, `equipment_items`, `equipment_rentals`
- **Note:** These tables may exist empty on production from Phase 51 SQL — dormant schema only; no UI, no cron, no API

Development Priority Order

All engineering effort follows this sequence after Gate G (Phase 16 stable):

#	Initiative	Phase	Status
1	Security Hardening	P15	Next — after Gate G
2	Design System (OOU)	P1	Wave 2 foundation
3	Operations Command Center	P2	Core ops MVP
4	Event Hub	P3	Per-event command surface
5	Unified Inbox	P5	Messages + notifications
6	Auto Approval Engine	P6	Rules + shadow mode
7	Staff Intelligence	P7	Trust scores, readiness
8	Client Portal	P9	After P15 + GDPR gate
9	System Health Center	P10 + P18–P21	Health, cleanup, SSL, audit
10	AI Operations Assistant	P12	After inbox + intelligence

Supporting phases (parallel where safe)

- **P4 Live Ops** — with Event Hub (Wave 2)
- **P13 Staff PWA 2.0** — after Unified Inbox
- **P18–P22** — Cleanup, storage, monthly audit, SSL, emergency mode (under System Health)

- **P14 Public Website** — marketing refresh, lower priority than ops core

Platform Ops Modules (P18–P22)

Phase	Module	DB table
P18	Cleanup Center	platform_cleanup_log
P19	Storage Analyzer	platform_storage_snapshots
P20	Monthly System Audit	platform_audit_runs
P21	Domain & SSL Monitoring	platform_ssl_checks
P22	Emergency Event Mode	emergency_event_log

Strategic Statement

Keep Olasentra focused on being the **leading Event Operations Command Platform** — one place to run events, staff, attendance, compliance, messaging, payroll, invoicing, and operational intelligence. Do not dilute the product with unrelated verticals.

Olasentra Event Operations Command Platform

Database Health Report

Live production audit — read-only analysis

6 June 2026 · olastofx_eventstaff · MariaDB 11.4.10

Post Phase 16 · Gate G monitoring period

Executive Summary (Business)

Overall verdict: Database is **healthy for current scale** (~63 staff, 392 registrations, 32 events). Phase 16 verified: zero orphans, FKs in place, indexes applied.

Score	Rating	Summary
82	Overall Health	Solid live ops; good backup discipline
78	Performance	Fine today; tune before 2,000+ staff
68	Security	FKs improved; secrets in DB settings = main risk
90	Storage	Tiny DB (~0.3 MB); site files dominate disk
85	Data Quality	Clean emails; multi-event regs intentional

Priority issues

Severity	Issue	Impact
Critical	API keys, SMTP password, OAuth tokens in system_settings	Credential leak if backup exposed
High	deleteStaffProfileCompletely() incomplete cascade	GDPR erasure gap
High	getAllEvents() aggregates all registrations per load	Dashboard slows at scale
Medium	LOWER(TRIM(email)) bypasses indexes	Search slows at 5k+ rows
Medium	system_settings MyISAM + latin1	Engine/charset inconsistency
Low	5 platform ops tables (P18–P22) + 3 dormant equipment tables	Equipment rental out of scope

Section 1 — Database Overview

Metric	Value
Database name	olastofx_eventstaff
Server	MariaDB 11.4.10-cll-lve (shared hosting)
Total tables	27 (19 with data + 8 empty platform P51)
Total records	~1,045 rows
Database size (dump)	326.5 KB (~303 KB data payload)
Index size (est.)	80–120 KB (~30–40% of data)
Storage engines	InnoDB: 17 tables · MyISAM: 2 (system_settings, push_subscriptions)
Live health	app ok · database ok · storage ok

Largest tables

Rank	Table	Rows	Data KB	% data
1	staff_registrations	392	162.1	53.5%
2	app_notifications	210	63.2	20.9%
3	staff	63	26.2	8.7%
4	admin_audit_log	154	16.2	5.4%
5	system_settings	69 keys	15.1	5.0%

Fastest growing

Table	Signal	Rate est.
-------	--------	-----------

staff_registrations	392 rows in ~4 days	~200–400/week peak season
app_notifications	210 JSON payloads	~50/day active ops
admin_audit_log	154 entries	~35/day
ip_geo_cache	107 lookups	Grows with traffic

Section 2 — Table Analysis (all 27 tables)

Table	Purpose	Rows	KB	Health	Notes
staff_registrations	Per-event registrations	392	162	A	53% of DB
app_notifications	Notification feed	210	63	A-	Fast growth
staff	Canonical profiles	63	26	A	Unique email
admin_audit_log	Admin audit	154	16	A	Good coverage
events	Event master	32	8	A	Summer roster
system_settings	Config + secrets	69	15	C	MyISAM; secrets
ip_geo_cache	Geo cache	107	8	B+	TTL cleanup
venues	Venues	7	1	A	Reference
work_types	Work types	5	1	A	Seed
personal_invoice_lines	Invoice lines	3	<1	A	FK P16
saved_job_records	Job records	2	<1	A	FK P16
admin_users	Admin accounts	1	<1	B	Single user
attendance	Check-ins	0	0	A	Pre-event
commission_invoices	Commission	0	0	A	Unused
commission_invoice_lines	Comm. lines	0	0	A	Unused
staff_messages	Inbox	0	0	A	FK P16
staff_blacklist	Blocked emails	0	0	A	Empty OK
push_subscriptions	PWA push	0	0	B	MyISAM
website_visits	Analytics	0	0	A	Enabled
platform_cleanup_log	P18	0	0	A	Schema only
platform_storage_snapshots	P19	0	0	A	Schema only
platform_audit_runs	P20	0	0	A	Schema only
platform_ssl_checks	P21	0	0	A	Schema only
emergency_event_log	P22	0	0	A	Schema only
equipment_categories	—	0	0	N/A	Out of scope — no dev
equipment_items	—	0	0	N/A	Out of scope — no dev
equipment_rentals	—	0	0	N/A	Out of scope — no dev

Empty operational: attendance, commission_*, staff_messages, staff_blacklist, push_subscriptions, website_visits ·

Archive candidates: ip_geo_cache (>90d), admin_audit_log (>12mo)

Section 3 — Index Analysis

Post-Phase 16 indexes (applied)

- `idx_staff_reg_event_status` on staff_registrations (event_id, status)
- `idx_events_active_date` on events (is_active, event_date)
- `idx_staff_email_lower` on staff (email)
- `idx_notif_admin_feed` on app_notifications (audience, is_read, created_at)

Finding	Severity	Detail
Duplicate indexes	Medium	staff.email: UNIQUE + idx_staff_email + idx_staff_email_lower
Overlapping indexes	Low	idx_staff_event + idx_staff_status vs composite
Missing functional index	Medium	LOWER(TRIM(email)) queries bypass btree
Full scan risk	Medium	getAllEvents() GROUP BY all registrations

Table	Query	Suggested index	Improvement
staff_registrations	LOWER(TRIM(email)) lookup	email_normalized generated column + index	10× at 5k+ rows
staff	Same pattern	Drop redundant idx_staff_email	Write efficiency
events	Active upcoming	idx_events_active_date 	Indexed
app_notifications	Inbox feed	idx_notif_admin_feed 	Indexed

Section 4 — Query Performance

Area	Query pattern	Cost now	Cost @ 5k staff	Recommendation
Dashboard	COUNT pending registrations	Low	Low	 Composite index
Staff list	event_id + status filter	Low	Low	 P16 index
Staff directory	LOWER(TRIM(email))	Medium	High	Normalized email column
Events	getAllEvents() GROUP BY	5–15ms	50–150ms	Cache registration counts
Attendance	Token UNIQUE lookup	O(1)	Low	 checkin_token
Sheets sync	Per-event API loops	Medium	High	Batch sync

Section 5 — Orphan Record Analysis

All checks **zero** post-Phase 16 deploy (verified 2026-06-06 14:44 UTC).

Check	Count	Severity	Action
missing staff_id	0	—	✓ Phase 49 backfill
orphan staff_id	0	—	✓
orphan staff_messages	0	—	✓ FK P16
orphan invoice_lines	0	—	✓ FK P16
orphan job event_id	0	—	✓ FK P16
attendance orphans	0	—	Empty table

Section 6 — Data Quality Report

Check	Result
Duplicate staff emails	0 (63 unique / 63 staff)
Duplicate per-event email	0 (uq_staff_email_event)
Multi-event registrations	63 people → 392 regs (avg 6.2 events/person) — by design
Staff ↔ registration link	✓ Phase 49 complete
PSA fields	Nullable on staff — profile gate enforces
Invalid event refs	0 orphan event_id
system_settings charset	latin1 MyISAM — migrate recommended
Secrets in settings	Present — Phase 15 target

Data Quality Score: 85 / 100

Section 7 — Storage Analysis

Item	Size
Live DB dump	326.5 KB
On-disk est. (data + indexes)	400–450 KB
site-files.zip (weekly)	431.8 MB (1,552 files)
settings-and-cms.json	24.1 KB

Horizon	DB size est.	Driver
3 months	1.5–2.5 MB	Registrations + notifications
6 months	4–6 MB	+ audit + attendance
12 months	10–15 MB	Notifications JSON + audit

Section 8 — Cleanup Opportunities

Item	Category	Savings
ip_geo_cache > 90 days	Safe to remove	5–50 KB
admin_audit_log > 12 months	Review required	Grows over time
Rejected regs > 24 months	Review required	Policy dependent
Application log files	Safe to remove	MB–GB (filesystem)
Empty platform tables	Do not remove	P18–P22 foundation

equipment_* tables	Review later	May drop if approved — not in product roadmap
Duplicate staff indexes	Review required	10–20 KB

Section 9 — Security & Compliance

FK relationship	Status
staff_registrations → staff	✓
staff_messages → staff	✓ P16
personal_invoice_lines → saved_job_records	✓ P16
saved_job_records → events, admin_users	✓ P16
attendance → staff_registrations	⚠ No FK
app_notifications	⚠ Polymorphic, no FK

Security Score: 68 · **Compliance (GDPR ops): 72** · Weekly backup ✓ · Restore drill ⚠ unknown

Section 10 — Operations Readiness

Module	Score	Blockers
Command Center	78%	getAllEvents() aggregation
Event Hub	82%	Ready
Live Ops	55%	attendance empty; emergency schema ready
Unified Inbox	60%	0 messages; delete cascade incomplete
Auto Approval	50%	No rules engine in DB
Staff Intelligence	40%	Trust scores table not created
Client Portal	75%	63 profiles; PSA fields present
AI Operations Assistant	15%	No embeddings/log tables

Section 11 — Future Scale Report

Scale	Regs est.	DB est.	Bottleneck
500 staff	3,000–4,000	2–3 MB	getAllEvents() GROUP BY
1,000 staff	6,000–8,000	5–8 MB	LOWER(TRIM email)
5,000 staff	30,000–40,000	30–50 MB	Dashboard + Sheets sync
10,000 staff	60,000–80,000	60–100 MB	Shared hosting query time

Section 12 — Action Plan

Priority	Action	Phase
Critical	Externalize secrets from system_settings	P15
High	deleteStaffProfileCompletely cascade fix	P16b
High	Cache event registration counts	P2 Command Center
Medium	Normalized email index	P16b+
Medium	Audit log retention policy	P18
Low	Drop duplicate idx_staff_email	After EXPLAIN

30-day plan

1. Gate G → Phase 15 security (secrets)
2. Phase 16b: runner + delete cascade
3. Event count cache + EXPLAIN audit
4. P18 Cleanup: geo TTL + audit rotation

Appendix A — SQL Recommendations (do not execute without approval)

```
-- DIAGNOSTIC (read-only)
SELECT table_name, engine, table_rows,
       ROUND(data_length/1024,1) AS data_kb,
       ROUND(index_length/1024,1) AS index_kb
FROM information_schema.tables
WHERE table_schema = DATABASE()
ORDER BY data_length DESC;

EXPLAIN SELECT COUNT(*) FROM staff_registrations
WHERE event_id=1 AND status='pending';

-- ORPHAN RE-CHECK (expect 0)
SELECT COUNT(*) FROM staff_registrations
WHERE staff_id IS NULL OR staff_id=0;

-- OPTIMIZATION (change window)
```

```
ALTER TABLE staff_registrations
  ADD COLUMN email_normalized VARCHAR(150)
    GENERATED ALWAYS AS (LOWER(TRIM(email))) STORED,
  ADD INDEX idx_sr_email_normalized (email_normalized);

-- CLEANUP (P18 - review first)
DELETE FROM ip_geo_cache
WHERE cached_at < DATE_SUB(NOW(), INTERVAL 90 DAY);
```

Appendix B — Methodology

- Production mysqldump 2026-06-06 14:43 UTC (326.5 KB) for row/size stats
- Phase 48–51 verified via deploy log 14:44 UTC
- Codebase query review (staff-repository, events-repository, attendance)
- No live information_schema or production SQL executed
- Index sizes estimated; no slow query log available

Olasentra Event Operations Command Platform

Phase 16 Deployment Results

Production execution report — Gate F approved

Deployed 6 June 2026 · 14:44 UTC · admin.olasentra.com

PHASE16_COMPLETE

1. Executive summary

Phase 16 database optimization deployed successfully on production during the approved off-peak window. All Gate F conditions were met. Phase 15 security hardening remains **blocked** until Gate G (24-hour stability + explicit approval).

Item	Result
Gate F approval	Approved — 6 June 2026
Deployment window	Off-peak · 14:44:06 UTC
Duration	~1 second (SQL execution)
Outcome	SUCCESS
Production baseline	Event #1 Nick Cave — 36 registrations unchanged
Gate G status	PENDING — 24h monitor until ~7 June 2026 14:44 UTC

2. Gate F conditions — verification

#	Condition	Status	Evidence
1	Full production backup completed and verified	✓ Pass	DB 326.5 KB · settings 24.1 KB · site 431.8 MB (1,552 files)
2	phase16-precheck output saved	✓ Pass	storage/backups/phase16/phase16-precheck-20260606.txt
3	Orphan count zero before Phase 50	✓ Pass	All 5 orphan checks = 0
4	phase16-postcheck zero failures	✓ Pass	bad_count = 0 · 8 platform tables
5	Full smoke test completed	✓ Pass	health.php · register · admin login
6	Monitor production 24 hours	⌚ In progress	Gate G not yet approved
7	Gate G before Phase 15	⌚ Pending	Phase 15 blocked

3. Backup record

Artifact	Size	Location
database.sql (server)	326.5 KB	storage/backups/weekly/database.sql
database.sql (local archive)	334,342 bytes	storage/backups/phase16/production-backup-20260606/database.sql
settings-and-cms.json	24.1 KB	storage/backups/weekly/settings-and-cms.json
site-files.zip	431.8 MB	storage/backups/weekly/site-files.zip
Local pre-deploy zip	4.44 MB	storage/backups/pre-deploy-20260606-144326.zip

4. Migrations applied

File	Step	Result	Description
phase16-precheck.sql	2	✓	Read-only diagnostics
migrate-phase48-composite-indexes.sql	5	✓ OK	Indexes on staff_registrations, events, staff, app_notifications
migrate-phase49-backfill-staff-id.sql	6	✓ OK	Linked staff_id on all registrations
migrate-phase50-foreign-keys.sql	8	✓ OK	FKs: staff_messages, personal_invoice_lines, saved_job_records
migrate-phase51-platform-ops-tables.sql	9	✓ OK	5 platform ops tables + 3 dormant equipment tables (no dev planned)
phase16-postcheck.sql	10	✓	Verification passed

4.1 Orphan gate (pre Phase 50)

```
missing_staff_id    = 0
orphan_staff_id     = 0
orphan_messages     = 0
```

```
orphan_invoice_lines = 0
orphan_job_event      = 0
```

4.2 New tables (Phase 51 — schema only, no UI yet)

Table	Future phase
platform_cleanup_log	P18 Cleanup Center
platform_storage_snapshots	P19 Storage Analyzer
platform_audit_runs	P20 Monthly System Audit
platform_ssl_checks	P21 Domain & SSL Monitoring
emergency_event_log	P22 Emergency Event Mode
equipment_* (3 tables)	Out of scope — rental removed from roadmap

5. Production baseline — unchanged

Event	Status	Count
#1 Nick Cave	approved	35
#1 Nick Cave	rejected	1
Total		36

6. Smoke test results

#	Test	Expected	Result
1	api/health.php	database: ok	✓ app, database, storage = ok
2	Event #1 registration counts	36 rows	✓ 35 approved + 1 rejected
3	Platform tables	8 tables	✓ platform_tables = 8
4	Index idx_events_active_date	Present	✓ Verified
5	register.olasentra.com	HTTP 200	✓
6	admin.olasentra.com/admin/login.php	HTTP 200	✓

7. Deployment log (verbatim)

```
[2026-06-06 14:44:06] === Phase 16 deploy start ===
[2026-06-06 14:44:06] Log file: /home/olastofx/public_html/storage/backups/phase16/phase16-deploy-20260606-144406.log
[2026-06-06 14:44:06] STEP 1: Backup skipped (orchestrator ran backup)
[2026-06-06 14:44:06] STEP 2: phase16-precheck.sql
[2026-06-06 14:44:06] STEP: migrate-phase48-composite-indexes.sql
[2026-06-06 14:44:07] OK
[2026-06-06 14:44:07] STEP: migrate-phase49-backfill-staff-id.sql
[2026-06-06 14:44:07] OK
[2026-06-06 14:44:07] STEP: Orphan gate (must be zero before phase 50)
[2026-06-06 14:44:07]   missing_staff_id = 0
[2026-06-06 14:44:07]   orphan_staff_id = 0
[2026-06-06 14:44:07]   orphan_messages = 0
[2026-06-06 14:44:07]   orphan_invoice_lines = 0
[2026-06-06 14:44:07]   orphan_job_event = 0
[2026-06-06 14:44:07] STEP: migrate-phase50-foreign-keys.sql
[2026-06-06 14:44:07] OK
[2026-06-06 14:44:07] STEP: migrate-phase51-platform-ops-tables.sql
[2026-06-06 14:44:07] OK
[2026-06-06 14:44:07] STEP: phase16-postcheck.sql
[2026-06-06 14:44:07] STEP: Smoke — event #1 counts
[2026-06-06 14:44:07]   baseline: approved=35, rejected=1
[2026-06-06 14:44:07]   platform_tables = 8
[2026-06-06 14:44:07] PHASE16_COMPLETE
[2026-06-06 14:44:07] === SUCCESS ===
```

8. Rollback reference

If issues arise during the 24-hour monitor window:

```
LEVEL 1 (partial): database/rollback-phase48-51.sql
LEVEL 2 (full):   Restore storage/backups/phase16/production-backup-20260606/database.sql
```

Note: Level 1 rollback does not undo staff_id backfill from phase 49 (intentional).

9. Next steps

Gate G — required before Phase 15

- 1. Monitor production until ~7 June 2026 14:44 UTC (24 hours from deploy)
- 2. Verify manually: admin/staff.php?event_id=1 (36 rows), inbox, job records
- 3. Check storage/logs/error.log for new errors
- 4. Reply **Gate G approved** to begin Phase 15 security hardening

Phase 16b (not yet started)

- Update includes/database-migrations.php runner manifest (52 files)
- Extend deleteStaffProfileCompletely() cleanup
- Go-live migration status UI

10. Artifact index

File	Purpose
docs/PHASE-16-DEPLOYMENT-RESULTS.pdf	This report

storage/backups/phase16/production-backup-20260606/database.sql	Pre-migrate DB dump
database/rollback-phase48-51.sql	Partial rollback script
cron/run-phase16-deploy.php	Deployment runner (on server)

Olasentra Event Operations Command Platform

Phase 16 Implementation Package

Database Optimization — Full deploy blueprint

v1.0 · 6 June 2026 · SQL artifacts generated · PHP not modified

Await Gate F approval before production execution

1. Objective & Scope

Item	Detail
Phase	P16 — Database Optimization
Business value	Faster ops queries; referential integrity; migration runner completeness; schema foundation for P18–P22 platform modules
In scope	Runner consolidation manifest, indexes, staff_id backfill, FK constraints, 8 platform tables, diagnostic SQL
Out of scope (Phase 16b)	PHP runner update, deleteStaffProfileCompletely extension, UI for Cleanup Center
Blocked until complete	Phase 15 Security Hardening (per approval directive)

2. Current Database Analysis

2.1 Existing tables (20 production tables)

Table	Rows (typical)	Phase 16 action
events	32+	Add index idx_events_active_date
staff_registrations	36+ (event 1)	Index + backfill staff_id
staff	~35 unique	Index email; backfill target
attendance	Low	No schema change
staff_messages	Low	Add FK → staff
app_notifications	Growing	Add inbox index
saved_job_records	Low	Add FK event_id, created_by
personal_invoice_lines	Low	Add FK → saved_job_records
commission_invoices	Low	Already has FKs
admin_users, system_settings, venues, work_types, staff_blacklist, push_subscriptions, email_reminder_log, admin_audit_log, website_visits, ip_geo_cache	—	No change

2.2 Migration runner gap (critical finding)

includes/database-migrations.php runs only phases **3–34 + 43**. Missing from runner but SQL files exist:

```
migrate-phase11-site-urls.sql
migrate-phase12-company-home.sql
migrate-phase13-website-content.sql
migrate-phase30-staff-role-varchar.sql
migrate-phase31-staff-registration-save.sql
migrate-phase35-staff-table.sql → staff table may exist only via manual run
migrate-phase36-populate-staff-table.sql
migrate-phase37-add-staff-id-to-registrations.sql
migrate-phase38-link-registrations-to-staff.sql
migrate-phase39-staff-profile-token.sql
migrate-phase40-psa-licence-fields.sql
migrate-phase41-force-profile-update.sql
migrate-phase42-website-visits.sql
migrate-phase44-staff-messages.sql
migrate-phase45-job-records.sql
migrate-phase46-job-record-type.sql
migrate-phase47-personal-invoice-lines.sql
```

Additionally **24 ensure*Schema()** functions in PHP create tables at page-load — Phase 16b will reduce reliance after runner applies SQL.

2.3 Known integrity gaps (audit)

- staff_registrations.staff_id nullable — some rows unlinked
- staff_messages.staff_id — no FK
- personal_invoice_lines.invoice_id — no FK

- `saved_job_records.event_id` — no FK
- `deleteStaffProfileCompletely()` — does not delete `staff_messages`, `app_notifications`, `push_subscriptions` (Phase 16b PHP)
- Queries use `LOWER(email)` — index on `staff.email` helps; full normalize deferred

2.4 Production baseline (must not change counts)

```
Event #1 Nick Cave: expect 36 registrations (35 approved, 1 rejected)
api/health.php: app, database, storage = ok
```

3. Exact Files Affected

3.1 SQL artifacts (GENERATED — ready to run)

File	Run order	Mutates data?
database/phase16-precheck.sql	Step 2	Read-only
database/migrate-phase35-47.sql	Step 4 (if tables missing)	Yes (if not applied)
database/migrate-phase48-composite-indexes.sql	Step 5	No
database/migrate-phase49-backfill-staff-id.sql	Step 6	Yes — links/creates staff
database/migrate-phase50-foreign-keys.sql	Step 8	No (constraints only)
database/migrate-phase51-platform-ops-tables.sql	Step 9	Creates empty tables
database/phase16-postcheck.sql	Step 10	Read-only
database/rollback-phase48-51.sql	Rollback only	Yes — drops tables/FKs
docs/PHASE-16-RUNNER-MANIFEST.txt	Phase 16b	Reference

3.2 PHP files (Phase 16b — NOT modified yet)

File	Change required	Risk
includes/database-migrations.php	Replace getDatabaseMigrationFiles() array per manifest (52 files)	High — test on clone first
includes/database-reset.php	Verify still calls runDatabaseMigrations after reset	Low
includes/staff-repository.php	deleteStaffProfileCompletely: add staff_messages, app_notifications, push_subscriptions cleanup	Medium
admin/go-live.php	Show last migration run + postcheck status	Low
includes/go-live.php	Optionally invoke phase16 postcheck query	Low

3.3 Files NOT touched in Phase 16

All admin/*.php UI, staff-app.php, api/* (except future health), apply/admin/*, assets/*, config.php on server.

4. Exact Migration Execution Plan

Step-by-step (production)

```
STEP 1 BACKUP (see Section 6)
STEP 2 Run database/phase16-precheck.sql → save output as phase16-precheck-YYYYMMDD.txt
STEP 3 If staff table missing: run migrate-phase35 through 37 manually
STEP 4 Run any missing phase 38-47 files (idempotent CREATE/ALTER)
STEP 5 Run migrate-phase48-composite-indexes.sql
STEP 6 Run migrate-phase49-backfill-staff-id.sql
STEP 7 Re-run phase16-precheck.sql sections 2,5,6,7 — MUST be 0 orphans
STEP 8 If orphans = 0: run migrate-phase50-foreign-keys.sql
    If orphans > 0: STOP — fix data manually — do NOT run step 8
STEP 9 Run migrate-phase51-platform-ops-tables.sql
STEP 10 Run database/phase16-postcheck.sql → save as phase16-postcheck-YYYYMMDD.txt
STEP 11 Production smoke test (Section 8)
STEP 12 Wait 24h — Gate G approval before Phase 15
STEP 13 Phase 16b: deploy PHP runner update (separate deploy)
```

New tables created (phase 51)

Table	Future phase
platform_cleanup_log	P18 Cleanup Center
platform_storage_snapshots	P19 Storage Analyzer
platform_audit_runs	P20 Monthly System Audit
platform_ssl_checks	P21 Domain & SSL Monitoring
emergency_event_log	P22 Emergency Event Mode

5. Exact Rollback Plan

5.1 When to rollback

- phase16-postcheck shows bad_count > 0 for orphan checks
- Nick Cave registration counts changed unexpectedly
- Admin staff list errors after migrate
- FK migration fails mid-run

5.2 Rollback procedure (ordered)

```
LEVEL 1 – Partial (phase 48-51 only, data preserved)
1. Run database/rollback-phase48-51.sql
2. Note: MySQL 8.0.19+ supports DROP INDEX IF EXISTS; older: manual DROP
3. Re-run phase16-postcheck
4. Application continues – staff_id backfill from phase 49 REMAINS (beneficial)

LEVEL 2 – Full database restore (catastrophic)
1. Maintenance mode ON (system_settings maintenance_mode=1)
2. Restore MySQL dump from Step 1 backup via cPanel/phpMyAdmin
3. Verify row counts match precheck baseline
4. Maintenance mode OFF
5. Smoke test Section 8

LEVEL 3 – PHP rollback (Phase 16b only)
1. Revert includes/database-migrations.php from git/backup
2. deploy.ps1
3. No DB change needed if SQL not re-run
```

5.3 What rollback does NOT undo

`migrate-phase49-backfill-staff-id.sql` population of staff_id — intentional. Level 1 rollback does not clear staff_id. Level 2 full restore does.

6. Exact Backup Procedure

6.1 Pre-migration backup (mandatory)

```
PRODUCTION (admin.olasentra.com):
1. Login → Admin → Settings → Backups
2. Click "Run full backup now" (backup-run.php)
3. Download all 3 weekly files from backups.php:
   - event-staff-database-*.sql
   - event-staff-settings-*.json
   - event-staff-site-*.zip
4. Store locally: C:\Backups\olasentra\phase16-YYYYMMDD\

LOCAL (developer machine):
powershell -ExecutionPolicy Bypass -File .\scripts\pre-deploy-backup.ps1
→ storage/backups/pre-deploy-YYYYMMDD-HHMMSS.zip

OPTIONAL cPanel:
phpMyAdmin → event_staff_system → Export → SQL → Save

RECORD:
- Backup timestamp
- File sizes
- phase16-precheck output
- Git commit hash (if any)
```

6.2 Backup verification

- SQL dump opens in text editor; contains CREATE TABLE staff
- Dump size > 100 KB (production with data)
- settings JSON contains site_name key

7. Risks & Mitigations

Risk	Severity	Mitigation
------	----------	------------

FK fail on orphan rows	Critical	precheck step 7 gate before phase 50
phase 49 creates duplicate staff	High	INSERT only WHERE email not in staff; UNIQUE on staff.email
Index already exists	Low	Runner skips duplicate; manual run may error — ignore
Long lock on staff_registrations UPDATE	Medium	Run off-peak; 36 rows = instant on current scale
equipment tables empty	None	Dormant — no development (not a rental platform)
Runner re-runs phase 35 on existing staff table	Low	CREATE TABLE IF NOT EXISTS

8. Exact Testing Procedure

8.1 Pre-migration tests (before Step 5)

#	Test	Expected
1	https://admin.olasentra.com/api/health.php	{"database":"ok"}
2	admin/staff.php?event_id=1	36 rows, all roles
3	admin/dashboard.php	Loads, pending count correct
4	register.olasentra.com index.php	Form loads
5	phase16-precheck.sql	Save output file

8.2 Post-migration tests (after Step 10)

#	Test	Expected
1	phase16-postcheck.sql	All bad_count = 0
2	SHOW INDEX idx_staff_reg_event_status	Exists
3	8 platform tables in information_schema	All present
4	staff.php event 1	Still 36 rows
5	staff-directory.php	Profiles load
6	staff-inbox.php / notifications.php	Load (FK intact)
7	job-records.php, personal-invoices.php	Load if used
8	submit.php test registration (staging email)	Creates row + staff_id set
9	scan-checkin.php	Camera page loads
10	apply-portal.php SSO	Bridge works

8.3 Performance verification

```
EXPLAIN SELECT COUNT(*) FROM staff_registrations WHERE event_id=1 AND status='pending';  
→ Should use idx_staff_reg_event_status after phase 48
```

8.4 24-hour monitoring (Gate G)

- No new errors in storage/logs/error.log
- api/health.php green
- No staff reports of registration issues
- Admin flash errors on dashboard

9. Effort & Approval

Work package	Effort	Owner
SQL package generation	Done	Architect
Production SQL execution	2 hours	DevOps + Admin
Phase 16b PHP runner	4 hours	PHP Engineer
deleteStaffProfileCompletely fix	2 hours	PHP Engineer
Total Phase 16	~1 week calendar	—

Gate F — Approve to execute on production:

1. Backup procedure accepted
2. SQL file list accepted
3. Rollback plan accepted
4. Testing checklist accepted
5. Maintenance window agreed (off-peak recommended)

Signature: _____ Date: _____

Phase 15 blocked until Gate G (P16 postcheck + 24h stable) is confirmed.

Event Operations Command Platform

Complete Implementation Master Plan

Definitive blueprint before development · LIVE production

Version 1.2 · 6 June 2026 · Phase 16 complete · Equipment rental removed from scope

Lead: Solutions Architect · PHP · UX · Product · Security · DB · DevOps

Implementation Master Plan — Olasentra

Status: v1.2 · **Active:** Gate G monitoring · **Next:** P15 Security → P1 Design System · **Constraint:** Zero-downtime phased deploys

PLATFORM FOCUS: Event Operations Command Platform — event staffing, workforce ops, attendance, compliance, messaging, payroll, invoicing, client portal, operations intelligence. **Not** equipment rental. See PLATFORM-FOCUS.pdf.

LIVE PRODUCTION RULE: Every phase ships independently. New routes wrap existing pages. Feature flags in system_settings. Full backup before each deploy. Rollback = revert FTP + restore DB snapshot.

Approved development priority (post Gate G)

1. P15 Security Hardening
2. P1 Design System
3. P2 Operations Command Center
4. P3 Event Hub
5. P5 Unified Inbox
6. P6 Auto Approval Engine
7. P7 Staff Intelligence
8. P9 Client Portal
9. P10 System Health Center (+ P18–P21)
10. P12 AI Operations Assistant

Executive Summary

Dimension	Current state	Target state	Phases
Admin pages	109 PHP files, 22 nav items	~45 screens + 14 nav + 3 hubs	P0–P5, P10–P11
Staff PWA	7-tile hub	3-tab shell (Home/Inbox/Account)	P13
Intelligence	Manual approval only	Auto-approval, trust scores, readiness	P6–P8
Client access	None	Client portal subdomain	P9
Security	6 open audit items	All HIGH closed	P15
Database	20 tables, partial migration runner	28+ tables, consolidated runner	P6–P8, P16
Total effort	—	~18–24 dev-weeks (1 senior)	P0–P17

Phase 0 — Full Implementation Analysis

Objective

Map UX Master Plan v2.0 to existing codebase. Establish reuse vs build decisions.

Business value

Eliminates duplicate work; de-risks production changes; defines exact file touch list.

0.1 Existing modules

Module	Primary files	Repository	Tables
Auth & roles	includes/auth.php, admin-capabilities.php	admin-users-repository.php	admin_users
Staff / registrations	admin/staff.php, staff-directory.php, view-staff.php	staff-repository.php	staff, staff_registrations
Events & venues	admin/events.php, event-form.php, venues.php	events-repository.php, venues-repository.php	events, venues, work_types
Attendance	admin/attendance.php, scan-checkin.php	attendance-repository.php	attendance
Work hours	admin/work-hours.php	work-hours-repository.php	attendance (hours cols)

Messaging	admin/staff-inbox.php, staff-messages.php	staff-messages.php	staff_messages
Notifications	admin/notifications.php, staff-notifications.php	notification-center.php	app_notifications
Finance	admin/invoices.php, job-records.php	commission-invoice-repository.php, job-record-repository.php	commission_invoices, saved_job_records
CMS / public	admin/website-*.php, home.php	website-content.php	system_settings
Ops / health	admin/ops-checklist.php, go-live.php	ops-checklist.php, go-live.php	system_settings
Apply satellite	apply/admin/admin/*	main-admin-bridge.php	Apply DB staff_master
Integrations	google-sheets-sync.php, google-drive-oauth.php	—	system_settings, events

0.2 Existing APIs (12 endpoints)

API	Auth	Reuse for
api/admin-staff-search.php	Admin + staff cap	P5 inbox, P12 AI search base
api/attendance-live.php	Admin + attendance	P2 Command Center, P4 Live Ops
api/notifications.php	Admin/staff session/token	P5, P11 smart notifications
api/notifications-mark-read.php	Same	P5 inbox
api/registrant-lookup.php	Public (OPEN RISK)	P15 rate limit
api/events.php, registration-options.php	Public	Unchanged
api/push-subscribe.php, push-vapid-public.php	Token	P11, P13 PWA
api/roster-check.php, health.php	Public	P10 health center

0.3 UX Master Plan → File mapping

UX feature	Existing	Modify	New	DB
Command Center	dashboard.php, getDashboardStats()	dashboard.php, layout-top.php	includes/command-center.php, api/command-center.php	Indexes only
Activity & Inbox	notifications.php, staff-inbox.php	notification-center.php, staff-messages.php	inbox.php, assets/js/inbox.js	app_notifications.type enum extend
Event Hub	events.php, staff.php, attendance.php...	Add event_id filter to all	event.php, includes/event-hub.php	None
Live Ops	scan-checkin.php, attendance-live API	scan-checkin-action.php	live-ops.php, assets/js/live-ops.js	attendance.incident_note (optional)
Command palette	header-bar.php erp-search	header-bar.php, admin.js	api/admin-search.php, assets/js/command-palette.js	None
Design system OOU	admin-sidebar.css, admin.css	All admin CSS	assets/css/ops-ui.css, includes/components/ops-*.php	None
Auto approval	update-status.php, staff-psa.php, blacklist	submit.php, staff-repository.php	includes/auto-approval-engine.php	approval_rules, approval_log tables
Staff trust score	attendance, blacklist partial	staff-directory.php	includes/staff-intelligence.php	staff_trust_scores table
Event readiness	ops-checklist.php, go-live.php	ops-checklist.php	includes/event-readiness.php	event_readiness_snapshots
Client portal	None	—	client/* entire subtree	client_users, client_event_access
System health	sidebar-health.php, go-live.php	go-live.php	admin/system-health.php	system_health_checks log
AI assistant	admin-staff-search partial	—	api/ai-ops.php, includes/ai-ops.php	ai_query_log
Staff PWA 2.0	staff-app.php, staff-messages.php	staff-app.php, pwa-head.php	staff-home.php, staff-account.php	None
Public redesign	home.php, website-*.php	All public pages	assets/css/public-premium.css	system_settings CMS keys

Security hardening	auth.php, .htaccess	apply/admin/*, api/registrant- lookup.php	includes/rate-limiter.php, apply CSRF helper	rate_limit_log
-----------------------	---------------------	---	---	----------------

0.4 Key dependencies

- **Composer:** web-token/jwt-library (push), guzzlehttp (HTTP), spomky-labs/pki-framework — do not break vendor/
- **External:** Google Sheets/Drive OAuth, SMTP, VAPID push, Apply SSO, FTP deploy
- **Runtime schema:** 24 ensure*Schema() functions — consolidate in P16 before adding more
- **Subdomains:** admin.*, register.*, apply.* — client.* new in P9

Phase 0 deliverables

Effort: [Complete \(this document\)](#) · Risk: None · Rollback: N/A

Phase 1 — Design System Foundation (OOU)

Objective

Establish Olasentra Ops UI tokens, primitives, and component PHP partials used by all subsequent phases.

Business value

Consistent high-density ops UI; faster phase delivery; one source of truth for Linear/Stripe aesthetic.

Design tokens (CSS custom properties)

```
assets/css/ops-ui.css (NEW — loaded after admin.css)
--ops-bg-base #030712    --ops-bg-canvas #f8fafc / #0b0f19
--ops-accent #8b5cf6      --ops-live #22c55e    --ops-warn #f59e0b    --ops-critical #ef4444
--ops-text-xs 11px       --ops-row-h 32px    --ops-radius 6px
Font: Inter (Google) + JetBrains Mono for KPIs
```

Files to update

File	Change
assets/css/admin.css	Import ops-ui.css; deprecate duplicate vars
assets/css/admin-sidebar.css	Align tokens to ops-ui.css
includes/admin/layout-top.php	Load ops-ui.css, Inter font
assets/css/messages.css, notifications.css	Extend with OOU badge/thread styles
assets/js/admin.js	Extract palette prep; move sidebar to admin-sidebar.js (done)

New files

- assets/css/ops-ui.css — tokens + utilities
- includes/components/ops-button.php — renderOpsButton()
- includes/components/ops-badge.php — status pills
- includes/components/ops-data-table.php — dense table wrapper
- includes/components/ops-kpi.php — ribbon + card KPIs
- includes/components/ops-attention-card.php — severity stack cards
- includes/components/ops-drawer.php — right panel shell
- includes/components/ops-empty-state.php
- assets/js/ops-ui.js — drawer, tabs, toast helpers

Component library scope (22 components — see Phase 1 checklist in UX Master Plan)

Modal: extend existing admin flash pattern. Form: reuse settings form classes. Notification: extend notification-list.php.

Database / APIs

None.

Risks

CSS regression on 109 pages. Mitigation: scoped .ops-* prefix; visual regression on dashboard + staff + events.

Rollback

Remove ops-ui.css from layout-top.php. Revert CSS files from backup.

Testing

- Dashboard, staff list, events, scan-checkin render correctly light+dark
- Sidebar collapse 280px→72px unchanged
- Mobile admin drawer works
- Staff PWA unaffected (separate CSS)

Deploy

CSS-only deploy. No DB. Clear browser cache note in ops checklist.

Effort: 1 week · Priority: **P0 blocker for P2-P5**

Phase 2 — Command Center

Objective

Replace dashboard.php hero layout with SOC-style Operations Command Center.

Business value

Ops managers see prioritized actions in <3 seconds; event-day CTA auto-surfaces; reduces navigation by 40%.

Features → implementation

Feature	Existing code	Implementation
Status Ribbon	getDashboardStats(), getTodayCheckinCount()	includes/command-center.php → getCommandCenterRibbon()
Attention Stack	dashboard.php pending preview, countUnread*	getCommandCenterAttentionStack() — max 5 severity-sorted
Event Timeline	getUpcomingEventsSummary()	Extend with approved/pending/on-site per event
Live Activity Feed	api/attendance-live.php	Embed poll 30s on event day; reuse getLiveAttendancePayload()
Event Context Selector	staff.php event filter	Header OpsEventSelector; persist ?event_id= + localStorage
Quick Actions	dashboard quick strip	Role-filtered; single primary CTA from attention stack
Dashboard Intelligence	ops-checklist getOpsLiveMetrics()	Merge ops metrics into attention stack

Files affected

Modify: admin/dashboard.php (full restructure), includes/admin/header-bar.php (event selector), includes/staff-repository.php (new queries), includes/admin-capabilities.php (nav label "Command Center")

New: includes/command-center.php, api/command-center.php (JSON poll for ribbon/feed), assets/js/command-center.js

Database

Recommended index: `staff_registrations(event_id, status)` — migration phase 48

APIs

- `GET api/command-center.php?event_id=` — ribbon, attention, timeline, feed (admin session)

Risks

Performance on large registration counts. Mitigation: indexed queries, limit feed to 20 rows, cache timeline 5min.

Rollback

Revert dashboard.php from backup. Remove api/command-center.php.

Testing

- Admin/Manager/Staff role see correct panels
- Event selector filters all panels
- Attention stack links work (pending→staff.php, messages→inbox.php)
- Live feed activates only on event day window
- Nick Cave production: 36 registrations display correctly

Effort: **1.5 weeks** · Depends: P1

Phase 3 — Event Detail Hub (event.php)

Objective

Single event command page with 8 tabs embedding existing functionality.

Business value

One URL per event for all ops; eliminates 8 disconnected nav hops.

Tab mapping

Tab	Embeds existing	Query param
Overview	NEW stats panel	event.php?id=X
Roster	admin/staff.php	?event_id=X&embed=1
Attendance	admin/attendance.php	?event_id=X&embed=1
Hours	admin/work-hours.php	?event_id=X&embed=1
QR & Sign-in	print-qr.php, event-sign-qr.php	inline panels
Sheets	events-sheets-action UI	from events.php row actions
Finance	invoice-quick.php, job-records filtered	event_id filter
Config	event-form.php fields read-only + quick edit	work_types, roles_needed

Files

New: admin/event.php, includes/event-hub.php, assets/js/event-hub.js, assets/css/event-hub.css

Modify: admin/events.php (link→event.php), staff.php/attendance.php/work-hours.php (embed mode: hide sidebar via `$embedMode`), includes/admin/layout-top.php (embed layout variant)

Database

None required. Optional: `events.briefing_sent_at` for readiness (P8).

APIs

GET `api/event-overview.php?id=` — stats JSON for Overview tab

Risks

Embed mode CSS conflicts. Mitigation: `.ops-embed-layout` body class hides sidebar/header.

Rollback

events.php links back to old URLs. Delete event.php.

Testing

- All 8 tabs load with correct event filter
- Approve from Roster tab works
- Print QR from QR tab
- Deep link `event.php?id=1` matches Nick Cave data

Effort: **1.5 weeks** · Depends: P1, P2 optional

Phase 4 — Live Ops Mode (live-ops.php)

Objective

Full-screen event-day operations: scanner + roster board + live ticker.

Business value

Venue staff check in 3× faster; real-time on-site visibility; flight-control UX.

Features

Feature	Source
---------	--------

QR Scanner	admin/scan-checkin.php + scan-checkin-action.php
Live Check-ins	api/attendance-live.php (poll 10s)
Attendance Board	attendance-repository getAttendanceList filtered
Roster Board	staff.php approved list with on-site status
Incident Tracking	NEW optional attendance.incident_note column
Real-Time Updates	Extend attendance-live.php with WebSocket future; poll MVP

Files

New: admin/live-ops.php, assets/js/live-ops.js, assets/css/live-ops.css, includes/live-ops.php

Modify: admin/scan-checkin.php (redirect to live-ops or embed), includes/admin-capabilities.php (nav: Live Ops), scan-checkin-action.php (return JSON for AJAX scanner)

Database

Optional: `ALTER TABLE attendance ADD incident_note VARCHAR(255) NULL` — phase 49

APIs

- Extend `api/attendance-live.php` — add roster board payload (approved + checked_in flag)
- `POST admin/scan-checkin-action.php` — ensure JSON response mode

Auto-activation

includes/live-ops.php → `shouldActivateEventDayMode($pdo)` — checks event window; Command Center CTA links here.

Risks

Camera permissions on mobile admin PWA. Scanner failure fallback to manual check-in drawer.

Rollback

scan-checkin.php remains standalone. Remove live-ops nav item.

Testing

- QR scan records attendance (existing flow)
- Roster board updates within 10s
- Manual check-in drawer works
- Staff role lands on Live Ops by default
- Progress bar matches on-site count

Effort: **2 weeks** · Depends: P1, P3 recommended

Phase 5 — Unified Inbox (inbox.php)

Objective

Merge notifications.php + staff-inbox.php into Activity & Inbox with master-detail layout.

Business value

Single badge; one habit for ops comms; 50% fewer missed alerts.

Views

View	Data source	Existing functions
All	Merged timeline	NEW mergeInboxTimeline()
Messages	staff_messages	listStaffInboxThreads(), getStaffMessageThread()
Activity	app_notifications admin	getAdminNotifications()
System	app_notifications type=system	Filter by type

Files

New: admin/inbox.php, includes/inbox-repository.php, assets/js/inbox.js

Modify: includes/admin-capabilities.php (replace notifications+staff-inbox nav with inbox), includes/admin/sidebar.php (single badge), admin/notifications.php + staff-inbox.php (301→inbox.php?view=), includes/notification-center.php (add category field support P11)

Database

```
ALTER TABLE app_notifications ADD category ENUM('staff','events','attendance','finance','security','system') NULL;  
ALTER TABLE app_notifications ADD priority TINYINT UNSIGNED DEFAULT 2;
```

APIs

- GET `api/inbox.php?view=&event_id=&q=`
- POST `api/inbox-mark-read.php`

Risks

Timeline merge performance. Mitigation: paginate 50, index (audience, is_read, created_at) exists.

Rollback

Restore sidebar links to notifications.php + staff-inbox.php.

Testing

- Unread badge = messages + activity combined
- Reply in thread without page reload
- Activity CTA opens correct target
- Filters: unread, today, by event

Effort: **1.5 weeks** · Depends: P1, P11 partial overlap

Phase 6 — Auto Approval Engine

Objective

Intelligent registration routing: auto-approve, manager review, incomplete, auto-reject.

Business value

Reduce manager workload 60% for repeat staff; faster roster fill; compliance gate automated.

Check pipeline (ordered)

1. Blacklist → Auto Rejected
2. Duplicate email+event → Auto Rejected
3. Profile completion (staff.profile_completed) → Incomplete (hold)
4. PSA validity (staff.psa_expiry_date) → Incomplete or Manager Review
5. Event roles_needed match → Manager Review if mismatch
6. Staff trust score < threshold (P7) → Manager Review
7. All pass + trust ≥ Gold/Silver → Auto Approved

Files

New: includes/auto-approval-engine.php, includes/approval-rules.php, admin/approval-rules.php (settings UI)

Modify: submit.php (run engine post-insert), admin/update-status.php (log override), includes/staff-repository.php (bulk path), includes/notification-center.php (notify outcome)

Database

```
CREATE TABLE approval_rules (  
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,  
  rule_key VARCHAR(50) NOT NULL UNIQUE,  
  is_enabled TINYINT(1) DEFAULT 1,  
  config_json JSON NULL,  
  updated_at TIMESTAMP  
);  
CREATE TABLE approval_log (  
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,  
  registration_id INT UNSIGNED NOT NULL,  
  outcome ENUM('auto_approved','manager_review','incomplete','auto_rejected') NOT NULL,  
  rule_results JSON NOT NULL,  
  decided_by ENUM('system','admin') DEFAULT 'system',  
  admin_user_id INT UNSIGNED NULL,  
  created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP,  
  INDEX idx_approval_reg (registration_id)  
);
```

APIs

POST api/approval-preview.php — dry-run for admin on view-staff.php

Risks

False auto-approve on production. Mitigation: feature flag `auto_approval_enabled=0` default OFF; shadow mode logs only for 2 weeks.

Rollback

Disable flag. Engine skipped in submit.php. approval_log retained for audit.

Testing

- Blacklisted email → rejected
- Incomplete profile → pending + profile_required notification
- Valid returning staff → auto-approved (flag on, staging only first)
- Manager override logged in approval_log

Effort: **2 weeks** · Depends: P7 trust score optional MVP without

Phase 7 — Staff Intelligence

Objective

Staff Trust Score (Gold/Silver/Standard/Review) + event staffing recommendations.

Business value

Data-driven roster decisions; reduce no-shows; premium staff prioritized.

Trust score model

Tier	Score range	Criteria weights
Gold	85–100	Attendance 40%, compliance 30%, tenure 20%, ratings 10%
Silver	70–84	Same formula
Standard	50–69	Default new staff
Review Required	<50 or flag	No-shows, blacklist history, PSA gaps

Metrics sources

- Attendance rate: attendance vs approved registrations per staff_id
- No-shows: approved + no attendance record after event end
- Compliance: staff.psa_expiry_date, profile_completed
- Event history: count approved registrations
- Manager ratings: NEW manual 1–5 on view-staff.php

AI recommendations (rule-based MVP, not LLM)

`suggestStaffForEvent($pdo, $eventId, $role, $limit)` — ranks by trust score + distance (eircode) + role match. Display on event.php Overview tab.

Files

New: includes/staff-intelligence.php, cron/compute-trust-scores.php, admin/staff-intelligence.php (report)

Modify: admin/staff-directory.php (trust badge), admin/view-staff.php (rating input), event.php Overview (suggestions panel)

Database

```
CREATE TABLE staff_trust_scores (  
  staff_id INT UNSIGNED PRIMARY KEY,  
  score SMALLINT UNSIGNED NOT NULL DEFAULT 50,  
  tier ENUM('gold','silver','standard','review') NOT NULL DEFAULT 'standard',  
  attendance_rate DECIMAL(5,2) NULL,  
  events_worked INT UNSIGNED DEFAULT 0,  
  no_show_count INT UNSIGNED DEFAULT 0,  
  manager_rating_avg DECIMAL(3,2) NULL,  
  computed_at TIMESTAMP,  
  FOREIGN KEY (staff_id) REFERENCES staff(id)  
);  
  
CREATE TABLE staff_manager_ratings (  
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,  
  staff_id INT UNSIGNED NOT NULL,  
  event_id INT UNSIGNED NULL,  
  admin_user_id INT UNSIGNED NOT NULL,  
  rating TINYINT UNSIGNED NOT NULL,  
  note VARCHAR(255) NULL,  
  created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP  
);
```

Risks

Score perceived as unfair. Mitigation: transparent breakdown on directory; manual tier override for admin.

Rollback

Hide badges UI. Cron stops. Tables retained.

Effort: **2 weeks** · Depends: P16 indexes, P6 optional integration

Phase 8 — Event Readiness Engine

Objective

Event Readiness Score (0–100) evaluating staffing, compliance, roster, sheets, briefing, venue.

Business value

Pre-event confidence metric; ops checklist automated; client reporting ready.

Scoring model (100 points)

Factor	Max pts	Source
Staffing level	25	approved / staff_needed
Compliance	20	% approved with valid PSA
Roster completion	20	pending cleared
Sheets sync	15	google_sheet_url set + last sync ok
Briefing status	10	briefing_sent_at or manual checklist
Venue readiness	10	venue GPS + eircode + times_confirmed

Files

New: includes/event-readiness.php

Modify: includes/ops-checklist.php (integrate score), admin/event.php Overview, admin/ops-checklist.php, Command Center attention stack

Database

```
CREATE TABLE event_readiness_snapshots (  
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,  
  event_id INT UNSIGNED NOT NULL,  
  score TINYINT UNSIGNED NOT NULL,  
  factors_json JSON NOT NULL,  
  computed_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP,  
  INDEX idx_readiness_event (event_id, computed_at)  
);  
ALTER TABLE events ADD briefing_sent_at TIMESTAMP NULL;
```

APIs

GET api/event-readiness.php?event_id=

Risks

Low — read-only computation.

Effort: **1 week** · Depends: P3 event hub

Phase 9 — Client Portal

Objective

Separate client-facing portal for event clients to view rosters, attendance, invoices, request staff.

Business value

Revenue retention; reduces email/WhatsApp reporting; professional client experience.

Architecture

```
client.olasentra.com (NEW subdomain)
client/
  index.php, login.php, logout.php
  dashboard.php – client events list
  event.php – roster + attendance read-only
  invoices.php – commission invoices for their events
  reports.php – PDF/CSV download
  request-staff.php – staffing request form → admin notification
  messages.php – thread with ops (optional P5 integration)
```

Permissions model

Role	Access
client_admin	All events for client_org
client_viewer	Read-only assigned events

Database

```
CREATE TABLE client_organisations (
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,
  name VARCHAR(150) NOT NULL,
  contact_email VARCHAR(150) NOT NULL,
  is_active TINYINT(1) DEFAULT 1
);
CREATE TABLE client_users (
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,
  org_id INT UNSIGNED NOT NULL,
  email VARCHAR(150) NOT NULL UNIQUE,
  password_hash VARCHAR(255) NOT NULL,
  role ENUM('admin','viewer') DEFAULT 'viewer',
  FOREIGN KEY (org_id) REFERENCES client_organisations(id)
);
CREATE TABLE client_event_access (
  client_org_id INT UNSIGNED NOT NULL,
  event_id INT UNSIGNED NOT NULL,
  PRIMARY KEY (client_org_id, event_id)
);
CREATE TABLE client_staff_requests (
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,
  org_id INT UNSIGNED NOT NULL,
  event_id INT UNSIGNED NULL,
  body TEXT NOT NULL,
  status ENUM('open','acknowledged','closed') DEFAULT 'open',
  created_at TIMESTAMP
);
```

Files (all NEW)

~15 PHP files under `client/`, `includes/client-auth.php`, `includes/client-repository.php`, `assets/css/client-portal.css`

Modify: `admin/event-form.php` (assign `client_org`), `includes/commission-invoice-repository.php` (client filter)

Risks

PII exposure to clients (roster names). Mitigation: configurable field visibility per org; GDPR consent.

Rollback

Subdomain not configured = portal unreachable. No impact on main ops.

Effort: **3 weeks** · Depends: P3, P15 security patterns

Phase 10 — System Health Center

Objective

Consolidate go-live.php + sidebar-health into full infrastructure monitoring dashboard.

Monitors

Check	Existing	Implementation
Database	api/health.php, sidebar-health	PDO ping + table count
Storage	api/health.php	writable storage/ check
Email	settings test send	SMTP connect test
Google Sheets	google-sheets-diagnostic.php	Token + sample read
Google Drive	google-drive-oauth.php	OAuth expiry check
Push	pwa-push.php VAPID	Key presence
SSL	NEW	curl https self-check
Backups	admin/backups.php	Last backup age
Cron	ops-checklist	daily-cleanup last run log
Apply Sync	apply-sync-ping.php	SSO + staff count compare

Files

New: admin/system-health.php, includes/system-health.php, api/system-health.php

Modify: admin/go-live.php (link→system-health), includes/admin/sidebar-health.php (delegate), includes/ops-checklist.php

Database

```
CREATE TABLE system_health_log (  
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,  
  check_key VARCHAR(50) NOT NULL,  
  status ENUM('ok','warn','fail') NOT NULL,  
  message VARCHAR(255) NULL,  
  checked_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP,  
  INDEX idx_health_time (checked_at)  
);
```

Alerting

Failed check → app_notifications (audience=admin, category=system) + optional email if 2 consecutive fails.

Risks

Google API quota on frequent checks. Mitigation: cache 15min per check.

Effort: 1 week · Depends: P1, P5 notifications

Phase 11 — Smart Notifications

Objective

Upgrade notification system with categories, priority, avatars, event badges, bulk actions, real-time.

Files

Modify: includes/notification-center.php (category/priority on create), includes/components/notification-list.php (avatar, badges), api/notifications.php (filter params), admin/inbox.php Activity view, staff-notifications.php

New: assets/js/notifications-realtime.js (poll 60s admin, 120s staff)

Database

Phase 5 category/priority columns. Add: `app_notifications.event_id INT UNSIGNED NULL`

Backfill categories

type prefix	category
registration*, status*	staff
event_*	events
checkin*	attendance
invoice*	finance

Risks

Low — extends existing table.
Effort: 1 week · Depends: P5 inbox

Phase 12 — AI Operations Assistant

Objective

Design Olasentra AI — ops query interface. MVP: structured queries, not generative LLM on PII.

MVP capabilities (rule-based + SQL templates)

Query type	Data source
"How many approved for Nick Cave?"	staff_registrations count
"Staff with expiring PSA"	staff.psa_expiry_date
"Event readiness"	event-readiness.php
"Payroll summary June"	attendance hours aggregate
"Suggest stewards for event X"	staff-intelligence.php

Architecture (future LLM-ready)

```
admin AI drawer (3EK → "Ask Olasentra")
→ api/ai-ops.php (admin session, rate limited)
→ includes/ai-ops.php query router
→ approved SQL templates ONLY (no raw LLM SQL)
→ log to ai_query_log
Optional Phase 12b: OpenAI API with anonymized aggregates only
```

Security model

- Admin role only (not manager initially)
- No PPS/IBAN in AI responses — mask sensitive fields
- 10 queries/min rate limit
- Full audit log
- PII fields excluded from any future LLM context

Files

New: includes/ai-ops.php, api/ai-ops.php, assets/js/ai-ops-drawer.js, admin/ai-ops-settings.php

Database

```
CREATE TABLE ai_query_log (
  id INT UNSIGNED AUTO_INCREMENT PRIMARY KEY,
  admin_user_id INT UNSIGNED NOT NULL,
  query_text VARCHAR(500) NOT NULL,
  intent VARCHAR(50) NULL,
  response_summary VARCHAR(255) NULL,
  created_at TIMESTAMP
);
```

Risks

Scope creep into LLM. Mitigation: MVP ships template queries only; LLM is Phase 12b gated on privacy review.
Effort: 2 weeks MVP · Depends: P5, P7, P8

Phase 13 — Staff PWA 2.0

Objective

3-tab shell: Home / Inbox / Account for signed-in staff.

Screen map

Tab	Route	Source
Home	staff-home.php (NEW)	Next shift from staff_registrations; status chips; broadcast
Inbox	staff-inbox.php (NEW) or staff-messages.php evolve	Merge staff-messages + staff-notifications
Account	staff-account.php (NEW)	staff-profile.php compact + PSA + sign out

Files

New: staff-home.php, staff-inbox.php, staff-account.php, includes/staff-app-nav.php, assets/css/staff-tabs.css, assets/js/staff-app.js

Modify: staff-app.php (redirect signed-in→staff-home), includes/staff-portal-session.php (landing URL), staff-messages.php + staff-notifications.php (301→staff-inbox), sw.js (cache shell), includes/pwa-head.php

Database

None.

Risks

Token-based access for unsigned users must remain on status.php / inbox ?token=.

Testing

- Install PWA on iOS/Android
- Push notification on approval
- Next shift card accurate
- Sign out returns to staff-app.php hub

Effort: **2 weeks** · Depends: P5 inbox patterns, P11 notifications

Phase 14 — Public Website Redesign

Objective

Premium marketing site — Apple/Netflix/Eventbrite aesthetic.

Pages

Page	File	Change
Home	home.php	Cinematic hero, event carousel, social proof
Events	events-page.php	Card grid from live events table
Join Team	roles.php + CTA→index.php	Role explainer video/embed
Services	NEW services.php	B2B client offering (feeds P9)
About	NEW about.php or CMS section	Company story
Contact	contact.php	Premium form

Files

New: assets/css/public-premium.css, assets/js/public-premium.js, services.php, about.php

Modify: includes/public/layout-top.php, all public pages, admin/website-*.php CMS keys

Database

system_settings: new CMS keys for services/about hero content.

Risks

SEO disruption. Mitigation: preserve URLs; 301 only for new pages.

Effort: **2 weeks** · Independent of admin ops phases

Phase 15 — Security Hardening

Objective

Close all HIGH audit items before intelligence/client portals expand attack surface.

Task list → files

Task	Files
Apply admin CSRF	apply/admin/includes/csrf.php (NEW), all apply/admin/admin/*.php POST forms, update-details.php
Upload validation	apply/admin/update-details.php — MIME, size, rename, CSRF
Rate limiting	includes/rate-limiter.php (NEW), api/registrant-lookup.php, api/ai-ops.php
Session hardening	apply/admin/includes/auth.php → initSecureSession()
SSO secrets	apply/admin/config/sso.local.php (deploy), remove dev fallback in apply-sso.php
GET→POST	admin/import-roster.php, apply/admin/admin/sync-sheets.php, admin/backups-export.php
Apply uploads htaccess	apply/admin/uploads/.htaccess (NEW)
API protection	api/*.php — X-Requested-With check for JSON endpoints

Database

```
CREATE TABLE rate_limit_log (  
  ip_hash CHAR(64) NOT NULL,  
  endpoint VARCHAR(80) NOT NULL,  
  hit_count INT UNSIGNED DEFAULT 1,  
  window_start TIMESTAMP,  
  PRIMARY KEY (ip_hash, endpoint)  
);
```

Risks

Apply CSRF breaks bookmarked POST flows. Mitigation: staging test on apply.olasentra.com first.

Rollback

Revert apply/admin files. Rate limiter disable flag in settings.

Effort: **1.5 weeks** · Priority: **Before P9 client portal**

Phase 16 — Database Optimization (PACKAGE READY)

Full package: docs/PHASE-16-IMPLEMENTATION-PACKAGE.pdf · SQL artifacts in database/

Objective

Consolidate migration runner (phases 11–13, 30–31, 35–51), composite indexes, staff_id backfill, FK gaps, platform ops tables for approved future modules.

SQL files (generated — not yet applied to production)

File	Purpose
database/phase16-precheck.sql	Read-only diagnostics BEFORE migrate
database/migrate-phase48-composite-indexes.sql	Performance indexes
database/migrate-phase49-backfill-staff-id.sql	Link registrations → staff
database/migrate-phase50-foreign-keys.sql	FK staff_messages, invoice lines, job records
database/migrate-phase51-platform-ops-tables.sql	Cleanup, storage, audit, SSL, emergency (equipment tables dormant — out of scope)
database/phase16-postcheck.sql	Verification AFTER migrate
database/rollback-phase48-51.sql	Rollback indexes, FKs, new tables

PHP changes (Phase 16b — after SQL approved)

- includes/database-migrations.php — runner manifest (52 files)
- includes/staff-repository.php — deleteStaffProfileCompletely() + messages/notifications/push
- admin/go-live.php — migration status panel

Execution order

Backup → precheck → runner gap SQL (35–47 if missing) → phase48 → phase49 → precheck orphans → phase50 → phase51 → postcheck → deploy PHP runner update.

Effort: **1 week** · **Gate F:** Approve PHASE-16-IMPLEMENTATION-PACKAGE before production SQL run · Phase 15 blocked until P16 complete

Phase 18 — Cleanup Center

Objective: Unified admin surface for safe log/temp/cache cleanup (evolves system-cleanup.php).

Reuse: admin/system-cleanup.php, includes/system-cleanup.php (getStorageUsageReport, runSystemCleanup)

New: admin/cleanup-center.php, includes/cleanup-center.php · **DB:** platform_cleanup_log (phase 51)

Effort: 1 wk · Depends: P16, P10

Phase 19 — Storage Analyzer

Objective: Deep disk analysis with trends, large-file finder, backup rotation advisor.

Reuse: getStorageUsageReport(), directorySizeBytes(), admin/backups.php

New: Tab in Cleanup Center · cron/monthly-storage-snapshot.php · **DB:** platform_storage_snapshots

Effort: 0.5 wk · Depends: P18

Phase 20 — Monthly System Audit

Objective: Automated monthly audit report (security, DB, backups, registrations, integrations).

Reuse: docs/AUDIT-REPORT template, go-live.php checks, ops-checklist.php

New: cron/monthly-system-audit.php, includes/monthly-audit.php, admin/audit-reports.php · **DB:** platform_audit_runs

Effort: 1 wk · Depends: P16, P10

Phase 21 — Domain & SSL Monitoring

Objective: Monitor admin.*, register.*, apply.*, main domain — SSL expiry, HTTP reachability.

Reuse: includes/site-urls.php, api/health.php pattern

New: includes/ssl-monitor.php, cron/ssl-check.php, System Health panel · **DB:** platform_ssl_checks

Effort: 0.5 wk · Depends: P10, P16

Phase 22 — Emergency Event Mode

Objective: One-click escalation: mass notify, lock roster, fullscreen Live Ops, incident log.

Reuse: live-ops.php (P4), event-staff-alerts.php, staff-broadcast.php

New: admin/emergency-event.php, includes/emergency-event.php · **DB:** emergency_event_log · Flag: feature_emergency_event_mode

Effort: 1 wk · Depends: P4, P11

Removed from roadmap (v1.2): Equipment Rental (former P23). Tables `equipment_categories`, `equipment_items`, `equipment_rentals` may exist empty on production — **no development** unless explicitly approved later. Olasentra is not an equipment rental platform.

Phase 17 — Deployment Strategy

Deployment pipeline (every phase)

1. Admin → Backups → Full backup (production)
2. scripts/pre-deploy-backup.ps1 (local zip)
3. Git commit (user-requested only)
4. Staging verification if available (laragon local)
5. powershell -ExecutionPolicy Bypass -File .\deploy.ps1
6. Post-deploy smoke test (see checklist per phase)
7. Monitor system-health + error logs 24h

Phase deployment order (recommended)

Wave	Phases	Rationale
Wave 1 Foundation	P16 ✓ → Gate G → P15 → P1	DB complete; security; design system
Wave 2 Core Ops	P2, P3, P4, P5	Command Center, Event Hub, Live Ops, Inbox
Wave 3 Intelligence	P6, P7, P8	Auto approval, staff intelligence, readiness
Wave 4 Health & Ops	P10, P18–P22	System Health Center, cleanup, SSL, emergency
Wave 5 Growth	P9, P13, P12	Client portal, Staff PWA 2.0, AI ops assistant
Wave 6 Marketing	P14	Public website refresh

Feature flags (system_settings keys)

```
feature_command_center_v2=0
feature_event_hub=0
feature_live_ops=0
feature_unified_inbox=0
feature_auto_approval=0
feature_trust_scores=0
feature_client_portal=0
feature_ai_ops=0
feature_staff_pwa_v2=0
```

Global rollback procedure

1. Restore FTP from pre-deploy-backup zip (scripts/upload-to-server.ps1 reverse manual)
2. Restore MySQL from admin/backups download
3. Clear opcache if applicable
4. Verify api/health.php

Global production smoke test

- admin login + dashboard load
- staff.php Nick Cave 36 rows
- register.olasentra.com form submit (test email)
- scan-checkin.php camera init
- staff-app.php load
- apply SSO bridge

Master Effort Summary

Phase	Name	Effort	Priority	Depends
P0	Analysis	Done	—	—
P1	Design System OOU	1 wk	Critical	—
P2	Command Center	1.5 wk	Critical	P1
P3	Event Hub	1.5 wk	High	P1
P4	Live Ops	2 wk	Critical	P1,P3
P5	Unified Inbox	1.5 wk	High	P1
P6	Auto Approval	2 wk	High	P16
P7	Staff Intelligence	2 wk	Medium	P16
P8	Event Readiness	1 wk	Medium	P3
P9	Client Portal	3 wk	Medium	P15,P3
P10	System Health	1 wk	High	P1
P11	Smart Notifications	1 wk	Medium	P5
P12	AI Ops Assistant	2 wk	Medium	P5,P7,P8
P13	Staff PWA 2.0	2 wk	High	P5,P11
P14	Public Website	2 wk	Medium	—
P15	Security Hardening	1.5 wk	Critical	—
P16	Database Optimization	1 wk	Critical	—
P17	Deployment Strategy	Ongoing	—	All
P18	Cleanup Center	1 wk	High	P16,P10
P19	Storage Analyzer	0.5 wk	Medium	P18
P20	Monthly System Audit	1 wk	High	P16,P10
P21	Domain & SSL Monitoring	0.5 wk	High	P10,P16
P22	Emergency Event Mode	1 wk	High	P4,P11
Total		~27 weeks	P16 complete · P15 after Gate G · P23 rental removed	

Approval Gates

1. **Gate A:** UX Master Plan v2 + Implementation Plan v1.0 — *APPROVED*
2. **Gate F (before P16 production SQL):** Approve PHASE-16-IMPLEMENTATION-PACKAGE.pdf
3. **Gate G (before P15):** P16 postcheck passed on production + 24h stable
4. **Gate B (before Wave 2):** P1 component library reviewed on staging
5. **Gate C (before P6 auto-approve):** Shadow mode 2 weeks minimum on production
6. **Gate D (before P9 client portal):** P15 security audit re-run; GDPR review
7. **Gate E (before P12 LLM):** Privacy impact assessment; MVP templates only until approved

Event Operations Command Platform

Olasentra UX Master Plan

Final architecture for approval before implementation

Version 2.0 · 6 June 2026 · Confidential · No code in this document

Workforce Operations · Event Staffing · Attendance · Messaging · Invoicing

Olasentra — Event Operations Command Platform

Status: Awaiting approval | Replaces: UX Blueprint v1 | Not: CRM · Generic ERP

North star: Transform Olasentra into Ireland's leading Event Operations Command Platform — the system ops managers live in from roster build through event night through invoicing. Think airport ops + SOC + Linear, not Salesforce.

0. Design Philosophy

What we are building

Is	Is not
Real-time ops command for event staffing	CRM for sales pipelines
High-density roster + attendance control	Generic ERP modules
Event-scoped workflows (pre → live → post)	Contact-centric CRM views
Staff workforce portal (PWA)	HRIS / payroll system (Apply stays satellite)
Commission invoicing for clients	Full accounting suite

Visual & interaction DNA

Source	What we take
Linear / Raycast	Keyboard-first, command palette, minimal chrome, fast transitions
Stripe / Vercel	Precise typography, status pills, dense data tables, dark command surfaces
Notion / Attio	Context panels, inline properties, filterable views
Flight Control / Airport Ops	Event timeline, live status boards, amber/red alert hierarchy
Security Operations Center	Multi-panel dashboards, attention queues, operator roles

Ten design mandates

1. **Command, not browse** — Every screen answers "what needs action now?"
2. **Event context is ambient** — Global event selector persists; most views filter to it
3. **Density over decoration** — 11–12px body, 32px row height tables, no wasted whitespace
4. **One inbox** — Messages and alerts are one stream with filters
5. **Event Day Mode** — Full-screen ops layout when live
6. **Palette over menus** — Cmd+K for navigation and actions
7. **Progressive disclosure** — 14 nav items max; depth via hubs and panels
8. **Role-native layouts** — Manager, venue operator, admin see different command centers
9. **Status is colour + icon** — Pending amber, approved green, live pulsing, critical red
10. **Mobile for staff, desktop for ops** — PWA thumb-zone; admin is keyboard + wide screen

- 1. Final navigation hierarchy
- 2. Command Center dashboard
- 3. Activity Center + Unified Inbox
- 4. Event Day Mode
- 5. Event Detail Hub
- 6. Global search + Command palette
- 7. Design system (Olasentra Ops UI)
- 8. Staff management blueprint
- 9. Finance blueprint
- 10. Public website blueprint
- 11. Staff PWA blueprint
- 12. Component library
- 13. Complete screen hierarchy
- 14. Implementation phases
- 15. Approval checklist

1. Final Navigation Hierarchy

14 primary nav items (down from 22). Grouped into 5 command zones. Sidebar stays glass-dark; groups collapse; rail mode at 72px.

COMMAND	
● Command Center	dashboard.php

● Activity & Inbox	inbox.php (NEW)	
● Live Ops	live-ops.php (NEW)	
WORKFORCE		
● Registration Queue	staff.php	
● Staff Directory	staff-directory.php	
EVENTS		
● Event Calendar	events.php	
● Venues	venues.php	
FINANCE		
● Invoicing	invoices.php (hub)	
● Exports	export-staff.php	
PLATFORM (admin only)		
● Forms & Registration	forms.php	
● Website	website-global.php	
● Settings	settings-site.php	
● System Health	go-live.php (hub)	

REMOVED FROM NAV (absorbed):

- notifications.php → Inbox tab "Activity"
- staff-inbox.php → Inbox tab "Messages"
- ops-checklist.php → Command Center panel + System Health
- work-types.php → Event Detail Hub + Config tab
- scan-checkin.php → Live Ops (primary) + Event Hub
- attendance.php, work-hours.php → Event Hub tabs
- job-records.php, personal-invoices.php → Invoicing hub tabs
- blacklist.php → Directory filter + Compliance panel
- users.php, audit-log.php, backups.php → Settings / System Health tabs
- apply-portal.php → Directory + Compliance action + Command Center link

Role visibility matrix

Nav item	Admin	Manager	Staff (venue)
Command Center	Full SOC layout	Full minus Platform	Scan-first minimal
Activity & Inbox	●	●	—
Live Ops	●	●	● default landing
Registration Queue	●	●	—
Staff Directory	●	●	—
Event Calendar	●	●	—
Venues	●	●	—
Invoicing / Exports	●	●	—
Platform (4 items)	●	—	—

2. Command Center Dashboard Blueprint

The true **Operations Command Center** — a SOC-style multi-panel surface replacing the current hero + KPI cards layout.

Layout: 12-column ops grid (desktop ≥1280px)

Panel specifications

Panel	Data	Interaction	Refresh
Status ribbon	Aggregated KPIs for selected event or all	Click segment → filtered view	30s poll / WebSocket future
Attention stack	Prioritized alerts: pending, messages, checklist, PSA	Max 5 cards, severity sorted	On load + push
Event timeline	events + registration counts + live window	Click row → Event Hub	5 min
Roster pulse	Registrations last 24h / 7d	Hover → breakdown by role	15 min
Check-in feed	attendance checked_in_at DESC	Live on event day only	10s on event day

Role variants

Role	Default landing	Primary CTA	Hidden panels
Administrator	Command Center	Contextual from attention stack	None
Manager	Command Center	Review pending OR Live Ops	Platform nav
Staff (venue)	Live Ops	Start scanning	All except Live Ops + ribbon

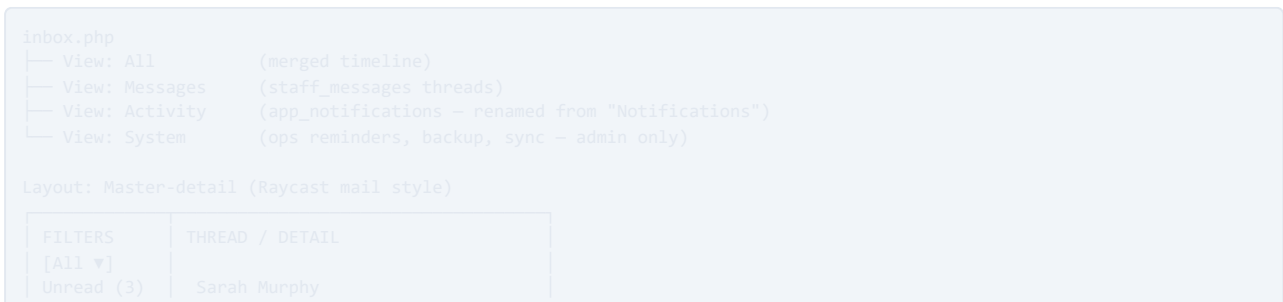

Event-scoped vs global mode

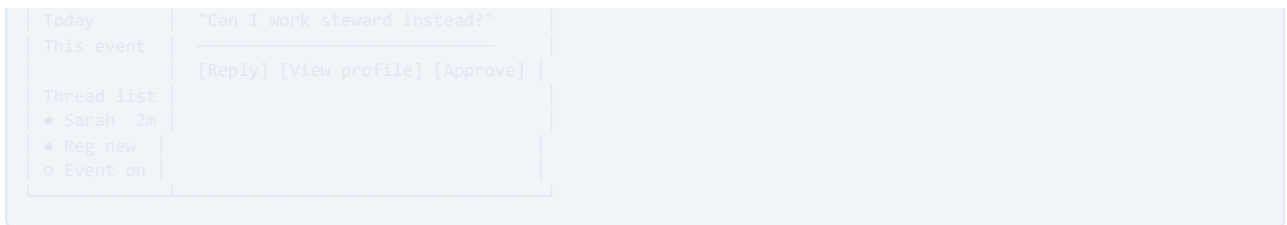

Header event selector toggles entire dashboard context. **Global** = all events aggregated. **Event-scoped** = single event ops board. Persisted in localStorage + URL `?event_id=`.

3. Activity Center + Unified Inbox Blueprint

Merge `notifications.php` + `staff-inbox.php` into **Activity & Inbox** (`inbox.php`). Two lenses on one data layer.

Information architecture

Activity item types (visual encoding)

Type	Icon	Colour	Source table	Action
registration	person+	blue	app_notifications	view-staff.php
status_change	check/x	green/red	app_notifications	view-staff.php
message	chat	violet	staff_messages	thread panel
event_live	calendar-bolt	amber pulse	app_notifications	Event Hub
checkin	qr	green	app_notifications	attendance.php
psa_alert	shield	amber	external/Apply	apply-portal.php
system	gear	slate	app_notifications	contextual

Badge & header rules

- **Single badge** in sidebar + header = unread messages + unread activity
- Header bell opens Inbox filtered to Activity · unread only
- Mark read on view (3s dwell) or action click
- Email + push remain async channels; Activity Center is source of truth

4. Event Day Mode Blueprint

Full-screen operational mode activated automatically or manually when an event enters its live window (start_time – 2h → end_time + 1h).

Activation triggers

- Auto: event date = today AND within time window
- Manual: "Enter Live Ops" from Command Center or Event Hub
- URL: `live-ops.php?event_id=X`

Layout: Flight-control split screen

Mobile venue operator variant

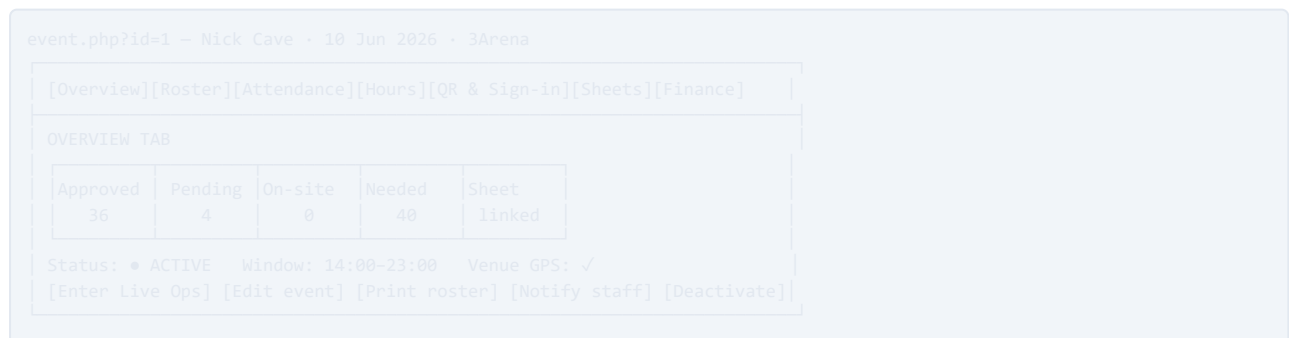

Scanner full-screen; roster as bottom sheet swipe-up. Haptic + audio on successful scan. Offline queue for scan results (sync when back online — future).

Existing file mapping

New surface	Existing backend
live-ops.php shell	NEW route wrapping scan-checkin + attendance
Scanner	scan-checkin.php + scan-checkin-action.php
Roster board	staff.php?event_id=X&status=approved
Manual check-in	checkin-action.php drawer
Progress bar	attendance count / approved count

5. Event Detail Hub Blueprint

Single event command page — the operational home for one event. Route: `event.php?id=X` (NEW shell over existing pages).

Tab → existing page mapping

Tab	Embeds / links	Primary actions
Overview	Stats + timeline + checklist for this event	Activate, edit, live ops

Roster	staff.php?event_id=X	Approve, bulk, export, print
Attendance	attendance.php?event_id=X	Manual check-in, export
Hours	work-hours.php?event_id=X	Adjust hours
QR & Sign-in	print-qr.php, event-sign-qr.php	Print, copy link
Sheets	events-sheets-action UI	Link sheet, sync roster
Finance	job-records + invoice quick for event	Create invoice
Config	work-types, roles_needed (inline)	Save event metadata

6. Global Search + Command Palette

Global search (header bar — extend existing erp-search)

```
Search: "murphy" / "nick cave" / "pending" / "invoice 2024"
Results grouped:
  STAFF (3)    → view-staff, directory profile
  EVENTS (1)   → event hub
  REGISTRATIONS → staff.php filtered
  INVOICES     → invoice-form
  ACTIONS      → "Approve all pending for Nick Cave"
```

Backend: new `api/admin-search.php` querying staff, staff_registrations, events, commission_invoices. Debounce 200ms.
Recent searches in localStorage.

Command palette (⌘K / Ctrl+K — Raycast-style)

```
⌘ Type a command or search...

RECENT
→ Review pending registrations
→ Open Live Ops — Nick Cave

NAVIGATE
→ Command Center
→ Registration Queue
→ Event: Kingfishr

ACTIONS
→ Scan check-in
→ Export attendance CSV
→ Run backup
→ Sync Apply vault
```

Palette command registry (initial 24 commands)

Command	Shortcut	Role
Go to Command Center	G then D	All
Go to Live Ops	G then L	All w/ attendance
Review pending	G then P	Manager+
Open inbox	G then I	Manager+
Search staff...	/	Manager+
Toggle event scope	E	Manager+
Enter Event Day Mode	Shift+L	All w/ attendance
Export staff CSV	—	Manager+
New event	—	Manager+
Ops checklist	—	Manager+

7. Design System — Olasentra Ops UI (OOU)

Design tokens

Token	Value	Usage
--ops-bg-base	#030712	Sidebar, command surfaces
--ops-bg-elevated	#0f172a	Cards on dark
--ops-bg-canvas	#f8fadc / #0b0f19 dark	Main content area
--ops-accent	#8b5cf6	Primary actions, focus ring
--ops-accent-hot	#ec4899	Live event, urgent
--ops-live	#22c55e + pulse	On-site, active event
--ops-warn	#f59e0b	Pending, attention
--ops-critical	#ef4444	Blocked, failed, overdue
--ops-font	Inter, system-ui	All surfaces
--ops-mono	JetBrains Mono	Times, IDs, tokens, KPIs
--ops-text-xs	11px / 1.35	Table cells, metadata
--ops-text-sm	12px	Body dense
--ops-text-base	13px	Body default
--ops-radius	6px cards, 4px inputs	Stripe-like precision
--ops-row-h	32px compact / 40px comfortable	Tables

Typography scale

Level	Size	Weight	Use
Display	24px	600	Command Center greeting
H1	18px	600	Page title
H2	14px	600	Panel title
Label	11px uppercase	500	Column headers, zone labels
KPI	28px mono	600	Status ribbon numbers

Status semantics (SOC palette)

State	Colour	Animation
Live event	Green border + pulse dot	2s pulse
Pending action	Amber left border	None
Critical	Red background tint	None
On-site staff	Green pill	None
Approved roster	Blue pill	None
Inactive event	Slate muted	None

Layout grid

- Sidebar: 260px expanded / 72px rail
- Header: 48px fixed
- Content max-width: none (full bleed for ops tables)
- Panel gap: 8px (tight) / 12px (standard)
- Breakpoints: <768 mobile drawer · 768–1279 compact · ≥1280 command layout

8. Staff Management Blueprint

Two-lens model

Lens	Screen	Unit of work	Primary user
Queue	staff.php	Registration (email × event)	Manager approving shifts
Directory	staff-directory.php	Person (staff record)	Manager maintaining profiles

Registration Queue — dense table view

Filters: [Event ▼] [Status ▼] [Role ▼] [Venue ▼] Bulk: [Approve] [Reject]

☐	Name	Event	Role	Status	Applied	
☐	Murphy, Sarah	Nick Cave	DSP	• PEND	04/06	...

Row ... menu: View · Approve · Message · Edit · Blacklist

Staff profile — split panel (Attio-style)

view-staff.php → two-column
LEFT: Identity, contact, PSA, bank (masked), compliance flags
RIGHT: Registrations for this person, attendance history, message thread

Directory filters (replaces blacklist nav)

- Profile incomplete
- PSA expiring / expired (Apply sync badge)
- Blacklisted
- Never worked
- Active this season

9. Finance Blueprint

Finance is a **post-event workspace**, not daily ops. Single hub with tabs.

```
invoices.php (Finance Hub)
├─ Tab: Commission Invoices    (commission_invoices)
├─ Tab: Job Records            (saved_job_records)
├─ Tab: Personal Invoices      (personal_invoice_lines)
└─ Tab: Export Center          (all export-* linked)
```

Workflow

Event completes → Event Hub · Finance tab → Quick invoice from attendance hours
→ job-record-form (reference) → print-invoice → export-month

Density rules

- Invoice list: 32px rows, inline status (draft/sent/paid/void)
- Right drawer for invoice preview (not full page navigation)
- EUR mono tabular numbers

10. Public Website Blueprint

Marketing site drives trust and registration. **Not** part of command platform — lightweight, fast, CMS-driven.

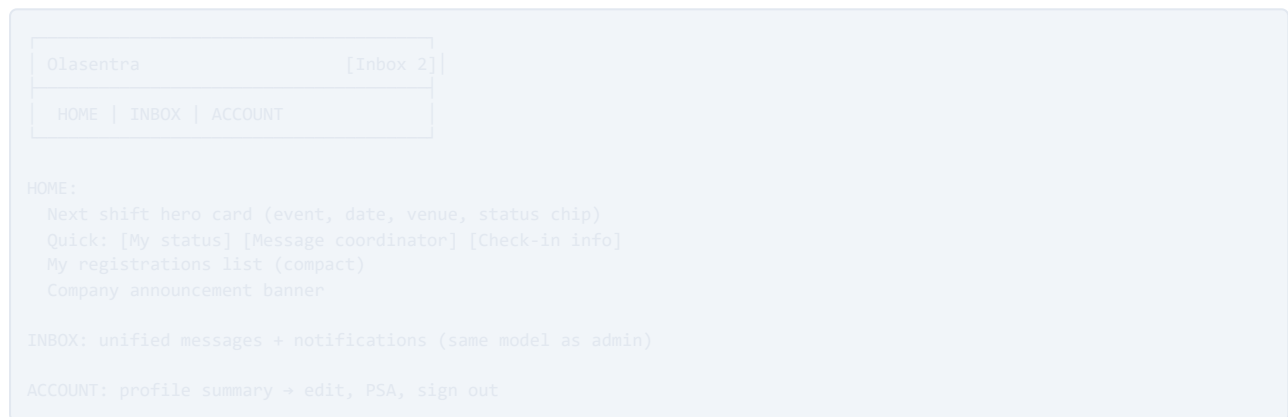

Zone	Pages	Goal
Discover	home, how-it-works, roles, events	Convert to registration
Trust	faq, contact, privacy	Reduce support load
Act	index.php on register.*	Submit application
Return	staff-app.php	Returning staff entry

Design: Public site uses company theme tokens but **not** ops-dark chrome. Hero + single CTA. Footer always links Staff App.

11. Staff PWA Blueprint

Staff experience = **mobile-first shift companion**. Not a mini admin panel.

Signed-in shell (3 tabs)

Logged-out: staff-app.php as landing/marketing

Register tile primary. Sign-in collapsed. Install PWA prompt. No fake "check-in" tile — check-in info on status page only.

12. Component Library (OOU Components)

Primitives

Component	Variants	Notes
OpsButton	primary, secondary, ghost, danger, live	32px height default
OpsInput	text, search, select, date	Inline label optional
OpsBadge	status, count, live-pulse	Semantic colours
OpsPill	pending, approved, rejected, on-site	Registration status
OpsKpi	ribbon, card, inline	Mono numerals
OpsAvatar	initials, sm/md	Staff + admin

Composite

Component	Purpose
OpsDataTable	Sortable, filterable, 32px rows, bulk select, sticky header
OpsAttentionCard	Severity border, title, metric, CTA — attention stack
OpsEventCard	Timeline row with counts + live indicator
OpsSplitPanel	Master-detail for inbox, staff profile
OpsCommandPalette	Modal overlay, fuzzy search, keyboard nav

OpsEventSelector	Header dropdown with search + recent
OpsScanner	Camera viewport + result flash + roster sync
OpsStatusRibbon	Horizontal KPI strip, click-to-filter
OpsDrawer	Right slide-over for quick edits, check-in, message
OpsEmptyState	Icon + one line + single CTA
OpsThread	Message bubble list (existing message-thread.php evolve)
OpsActivityItem	Icon + title + body + time + action button
OpsTabBar	Event hub tabs, underline style
OpsFlash	Top toast / banner (admin + staff)

Layouts

Layout	Used by
CommandLayout	Command Center, Live Ops
HubLayout	Event Hub, Finance Hub, Inbox
TableLayout	Queue, Directory, Attendance
StaffShell	PWA tab bar
PublicShell	Marketing + registration

13. Complete Screen Hierarchy

Admin ERP (primary routes only)

```

AUTH
  login.php · logout.php · index.php

COMMAND ZONE
  dashboard.php      Command Center
  inbox.php (NEW)    Activity & Inbox
  live-ops.php (NEW) Event Day Mode

WORKFORCE ZONE
  staff.php          Registration Queue
  staff-directory.php Staff Directory
  view-staff.php     Registration detail (split panel)
  staff-edit.php     Edit drawer/page

EVENTS ZONE
  events.php         Event Calendar
  event.php (NEW)    Event Detail Hub
  event-form.php     Create/edit
  venues.php · venue-form.php

FINANCE ZONE
  invoices.php       Finance Hub (tabs)
  export-staff.php   Export center

PLATFORM ZONE (admin)
  forms.php · form-edit.php
  website-global.php
  settings-site.php (+ tabs)
  go-live.php        System Health hub

ACTIONS (never in nav – 35+ POST handlers)
  update-status · bulk-status · save-event · scan-checkin-action · ...

```

Staff PWA

```

staff-app.php (logged-out hub)
staff-home.php (NEW – logged-in default)
staff-inbox.php (NEW unified – or tab route)
staff-account.php (NEW – profile shell)
staff-portal.php · staff-profile.php · status.php
staff-messages.php → absorbed into inbox

```

Public

home.php · how-it-works.php · roles.php · events.php · faq.php · contact.php · privacy.php
index.php · submit.php · staff-app.php

Apply (satellite — unchanged structure)

apply-portal.php → SSO → payroll · PSA · sync-sheets

14. Implementation Phases (for approval)

Phase	Scope	Deliverables	Risk
P0 Foundation	Design tokens, component primitives, nav regroup	OOU CSS vars, sidebar restructure, 14-item nav	Low
P1 Command Center	SOC dashboard redesign	Status ribbon, attention stack, event timeline	Low
P2 Unified Inbox	inbox.php + Activity Center	Merge messages + notifications, single badge	Medium
P3 Event Hub	event.php tab shell	8 tabs over existing pages	Medium
P4 Live Ops	live-ops.php Event Day Mode	Scanner + roster board split	Medium
P5 Command Palette	⌘K + api/admin-search.php	24 commands, fuzzy nav	Low
P6 Staff PWA	3-tab shell + staff-home	Home/Inbox/Account	Medium
P7 Finance Hub	Invoice tabs consolidation	Single finance workspace	Low

Deployment principle: Each phase ships independently. No big-bang rewrite. New shells wrap existing PHP pages via embed/include pattern.

15. Approval Checklist

Please confirm before implementation:

1. Platform positioning as Event Operations Command Platform (not CRM/ERP)
2. 14-item navigation structure and removed items absorbed into hubs
3. Command Center SOC layout with status ribbon + attention stack
4. Activity & Inbox unified surface (inbox.php)
5. Event Day Mode (live-ops.php) as default for venue staff role
6. Event Detail Hub (event.php) with 8 tabs
7. Command palette ⌘K + extended global search
8. Olasentra Ops UI design tokens and component library
9. Staff PWA 3-tab shell for signed-in users
10. Phased rollout P0–P7 (no big-bang)

Approved by: _____ **Date:** _____

Event Staff Platform — Complete UX Blueprint

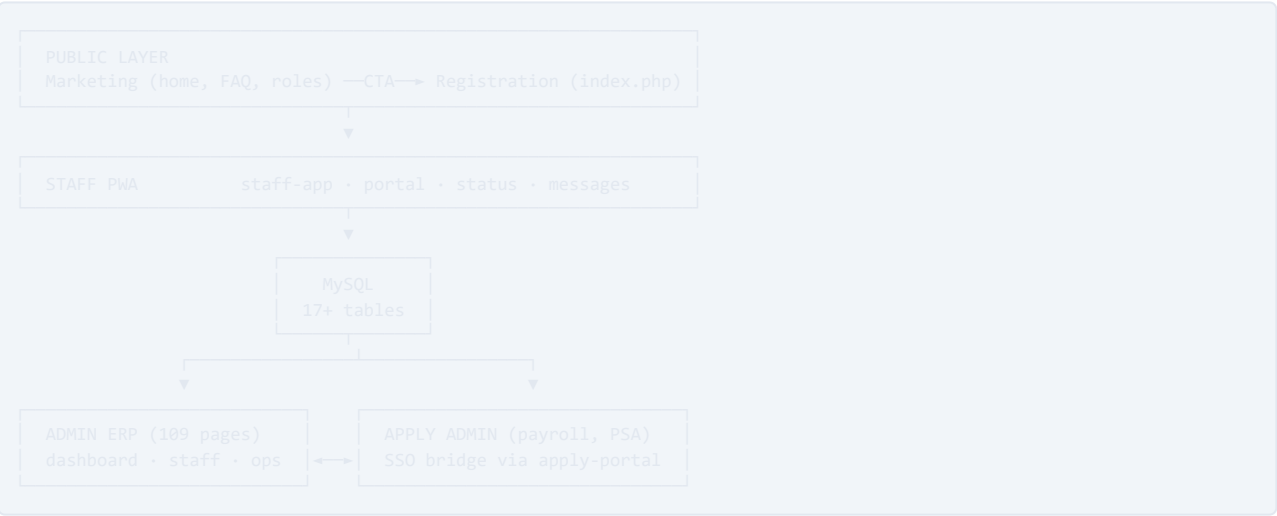

Document type: Information architecture & screen hierarchy | **Generated:** 6 June 2026 | **Scope:** Admin ERP · Staff PWA · Public website · Apply payroll | **Status:** Design blueprint — no code

- 1. Platform topology
- 2. Data model → UX domains
- 3. Current state gaps
- 4. Ideal information architecture
- 5. Navigation hierarchy
- 6. Dashboard architecture
- 7. Notification center
- 8. Public website
- 9. Staff PWA
- 10. Admin screen hierarchy
- 11. Event Detail hub
- 12. User journeys
- 13. Global patterns
- 14. Design principles
- 15. Implementation roadmap

1. Platform Topology

The system is a **workforce operations platform** with four surfaces sharing one data model:

Surface	Host	Primary users	Job to be done
Marketing site	Main domain	Prospective staff, clients	Trust, explain roles, drive registration
Registration site	register.*	New/returning applicants	Apply for shifts, submit PSA/bank details
Staff PWA	register.*	Approved/pending staff	Track status, check in, message ops, get alerts
Admin ERP	admin.*	Admin, Manager, Staff role	Run events: roster → attendance → finance
Apply admin	apply.*	Admin, payroll	PSA compliance, payroll export, master vault

2. Data Model → UX Domains

The database implies six product domains. UX should mirror these, not the current 22 flat sidebar links.

Domain	Core tables	Natural UX home
People	staff, staff_registrations, staff_blacklist	Staff Directory + Registration Queue
Events & venues	events, venues, work_types	Event Command Center
Field ops	attendance (+ work-hours columns)	Live Ops (check-in, hours)
Communications	staff_messages, app_notifications, push_subscriptions	Unified Inbox
Finance	commission_invoices, saved_job_records, personal_invoice_lines	Finance workspace
Platform	system_settings, admin_users, admin_audit_log, website_visits	Settings & governance

Key entity relationships

- `staff` = identity (one person, one email)
- `staff_registrations` = shift application (one row per email × event)
- `attendance` = check-in record (one per registration)
- `staff_messages` = threaded by `staff_id`, not registration
- `app_notifications` = dual audience (admin | staff), keyed by `staff_email` for staff

Design rule: Staff screens anchor on *person* (email/session). Admin screens support context switching between person view and event view.

3. Current State — Structural Gaps

Problem	Evidence	Impact
Flat admin nav	22 sidebar items; Finance hides 3 invoice sub-products	Cognitive overload
Split communications	Notifications + Messages separate nav + badges	Missed alerts, confused channels
Event ops scattered	Attendance, scan, hours, venues under Events	Event-day operators hunt across 6 pages
Settings sprawl	14 settings + go-live + backups + CMS under System	Admin tasks mixed with daily ops
Staff hub is tile grid	<code>staff-app.php</code> lists 6+ equal-weight tiles	No personalized "my next shift" view
Apply is a bridge	<code>apply-portal.php</code> SSO to another subdomain	Broken mental model
Invisible actions	~35 POST-only pages not in nav	Should be modals/drawers, not screens

4. Ideal Information Architecture

Admin ERP — 6 modules, 18 nav items max

```
OPERATIONS (default landing)
├─ Command Center    ─ role-adaptive dashboard
├─ Inbox             ─ messages + notifications unified
├─ Ops Checklist     ─ pre-event readiness
├─ Live Ops          ─ event-day: scan, attendance, roster

PEOPLE
├─ Registration Queue
├─ Staff Directory
├─ Compliance        ─ blacklist, PSA flags, incomplete profiles

EVENTS
├─ Event Calendar
├─ Event Detail      ─ single event hub (tabs, not nav item)
├─ Venues
├─ Work Types

FINANCE
├─ Client Invoicing  ─ commission invoices
├─ Job Records
├─ Personal Invoices
├─ Exports & Reports

CONTENT & GROWTH (admin only)
├─ Registration Forms
├─ Website CMS
├─ Visitor Analytics

SYSTEM (admin only)
├─ Settings          ─ tabbed: Site, Email, Integrations, Theme, Security
├─ Team & Access
├─ Go Live / Health
├─ Audit & Backups
```

Staff PWA — 3-tab shell

```
HOME      ─ My shifts, next event, quick status
INBOX     ─ Messages + notifications (single stream)
ACCOUNT   ─ Profile, PSA, bank, sign out
```

Hub tiles (staff-app.php) remain the **logged-out entry**; signed-in users land on Home.

Public website

```
DISCOVER  ─ Home, How it works, Roles, Events showcase
TRUST     ─ FAQ, Contact, Privacy
ACT       ─ Register (register subdomain)
RETURN    ─ Staff app / Sign in (footer CTA)
```

Registration funnel (single path)

```
Choose role/form → Select venue/events → Personal details → PSA/bank → Confirm → Status link
```

5. Navigation Hierarchy

Admin — role-based nav matrix

Nav item	Admin	Manager	Staff (venue)
Command Center	•	•	• simplified
Inbox	•	•	—
Live Ops	•	•	•
Registration Queue	•	•	—

Staff Directory	●	●	—
Events / Finance	●	●	—
Forms / CMS / System	●	—	—

Navigation patterns

Surface	Pattern	Use for
Admin	Persistent sidebar (280px / 80px rail)	Module switching
Admin	Context header bar	Event selector, date filter, staff search
Admin	Breadcrumbs	People → Directory → [Name] → Registration
Admin	Event-scoped sub-nav	Inside Event Detail: Overview · Roster · Attendance · QR
Staff PWA	Bottom tab bar	Home · Inbox · Account
Staff PWA	Deep links	status?token=, notification action_url, check-in QR
Public	Top nav + sticky CTA	Register for shifts

6. Dashboard Architecture (Command Center)

One route (`dashboard.php`), three role-adaptive layouts.

Layout zones (all roles)

Administrator / Manager

Zone	Content
Primary CTA	"Review N pending" OR "Open Live Ops" on event day
KPIs	Pending · Approved today · Check-ins today · Unread inbox
Attention queue	① Pending ② Unread messages ③ Ops checklist ④ PSA expiring
Timeline	Next 5 events with approved/pending/checked-in counts
Inbox preview	Unified messages + system notifications

Staff role (venue operator)

Zone	Content
Primary CTA	Start scanning → <code>scan-checkin.php</code>
KPIs	Check-ins today · On-site now · Remaining approved
Attention queue	Event selector (today's events only)
Quick actions	Scan · Attendance log · Work hours

Dashboard rules

1. **One primary CTA** — never 4 competing buttons
2. **Attention queue is prioritized**, not a flat card grid
3. **Event-day mode** auto-surfaces Live Ops when event is within ± 2 hours
4. **Drill-down only** — dashboard never edits data inline

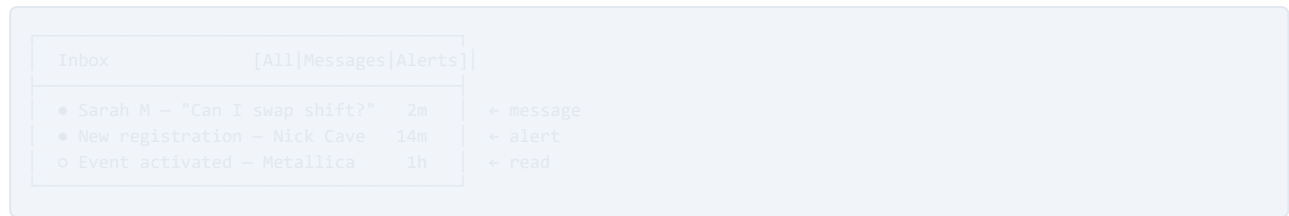

7. Notification Center Architecture

Ideal model: **one inbox, three delivery channels** (in-app, email, push).

Notification taxonomy

Type	Audience	Trigger	Primary action
registration_new	Admin	New submission	Registration detail
registration_status	Staff	Approve/reject	<code>status.php?token=</code>
event_activated	Staff	Event goes live	Register or status
profile_required	Staff	Incomplete profile	<code>staff-profile.php</code>
message_reply	Both	Thread activity	Message thread
ops_reminder	Admin	Daily cron	Ops checklist item
psa_expiry	Admin	Apply sync	Apply PSA compliance
checkin_confirm	Staff	Self check-in	Status page

Admin unified inbox

- **Messages tab** = staff_messages threads (staff-inbox.php)
- **Alerts tab** = app_notifications where audience=admin
- **All** = merged timeline; messages rank above read alerts
- **Single sidebar badge** = unread messages + unread alerts

Staff unified inbox

One tab in PWA replacing separate notification and message tiles. Token-based access preserved for unsigned users.

Delivery rules

Channel	When
In-app	Always
Email	Configurable per type in Settings → Notifications
Push	Staff PWA only; opt-in via push_subscriptions

8. Public Website Architecture

Marketing site map

Screen	File	Purpose
Home	home.php	Hero, trust, CTA to register
How it works	how-it-works.php	Apply → approved → check in
Roles	roles.php	DSP / Static / Steward
Events	events.php	Showcase active events
FAQ	faq.php	Self-service support
Contact	contact.php	Company contact
Privacy	privacy.php	GDPR / consent

Registration host (register.*)

Screen	File	Purpose
Registration form	index.php	Multi-event, form-slug registration
Submit handler	submit.php	POST processor (not a screen)

Public UX principles

1. Marketing ≠ Registration — separate URLs
2. One hero CTA on every page: Register
3. Footer: "Already registered? Open staff app"
4. No admin chrome — shared public shell only

9. Staff PWA Architecture

App shell (signed in)

Header: logo · notification badge
SCREEN CONTENT
[Home] [Inbox] [Account]

Logged out hierarchy

```
staff-app.php (Hub)
├─ Register → index.php
├─ Staff sign-in → staff-portal.php → staff-profile.php (if incomplete)
├─ My status → status.php (lookup or ?token=)
├─ Messages → staff-messages.php
├─ Notifications → staff-notifications.php
```

Logged in hierarchy

```
HOME
├─ Next shift card (event, date, status)
├─ Quick actions: Status · Check-in info · Message
├─ Active registrations list
├─ Announcement banner (staff_broadcast)

INBOX
├─ Unified feed (messages + notifications)
├─ Thread view
├─ Notification detail with CTA

ACCOUNT
├─ Profile summary (compact)
├─ Edit profile (?edit=1)
```

PWA feature priorities

Feature	Priority
Install prompt	Keep on hub
Service worker (shell cache)	Home + Inbox + status
Push notifications	Event activation, approval, message reply
Offline status view	Cache last-known status per token

10. Admin Screen Hierarchy (Complete)

Level 1 — Sidebar modules

OPERATIONS: Command Center · Inbox · Ops Checklist · Live Ops
PEOPLE: Registration Queue · Staff Directory · Compliance
EVENTS: Event Calendar · Venues · Work Types
FINANCE: Client Invoicing · Job Records · Personal Invoices · Exports
CONTENT: Forms · Website CMS (admin only)
SYSTEM: Settings · Team Users · Go Live · Audit (admin only)

Level 2 — Detail screens (not in nav)

Module	Screens
People	view-staff.php, staff-edit.php, staff-inbox-thread.php
Events	event-form.php, Event Detail hub, venue-form.php, attendance.php, scan-checkin.php, work-hours.php, print-roster.php
Finance	invoice-form.php, job-record-form.php, personal-invoice-form.php, print-invoice.php
Settings	settings-production.php, settings-email.php, settings-theme.php, settings-security.php, google-sheets-diagnostic.php, visitor-locations.php, geo-audits.php, backups.php

Level 3 — Actions (POST handlers → buttons/modals, never nav)

update-status.php, bulk-status.php, save-event.php, toggle-event.php, checkin-action.php, scan-checkin-action.php, ops-checklist-action.php, invoice-action.php, backup-run.php, user-action.php, and ~25 more.

11. Event Detail Hub (New Conceptual Screen)

Biggest IA win: one event command page instead of 8 disconnected links. Implemented as tabs over existing pages.

Event: Nick Cave — 10 Jun 2026

[Overview]	[Roster]	[Attendance]	[Hours]	[QR]	[Sheets]
------------	----------	--------------	---------	------	----------

Status: Active · Venue: 3Arena · 36 approved / 1 pending
Staff needed: 40 · Checked in: 0 · Sheet: [linked]
[Activate] [Edit] [Print roster]

ROSTER TAB	→ staff.php?event_id=X
ATTENDANCE TAB	→ attendance.php?event_id=X
HOURS TAB	→ work-hours.php?event_id=X

12. Critical User Journeys

A — New staff registration

Marketing home → Register → index.php → submit.php
→ email → status.php?token= (pending)
→ [admin approves] → notification + email
→ status.php (approved) → staff-app.php → install PWA

B — Event day operations

Command Center → "Live Ops" CTA
→ scan-checkin.php → attendance.php (exceptions)
→ work-hours.php → export-attendance.php

C — Pre-event readiness

ops-checklist.php → pending_cleared → staff.php
→ apply_sync → apply-portal.php
→ psa_expiry → Apply PSA compliance
→ sheets_spot_check → google-sheets-diagnostic.php

invoices.php → invoice-quick.php → print-invoice.php
→ job-records.php → export-invoices-month.php

13. Global Patterns

Pattern	Admin	Staff PWA
Global search	Staff name, email, event	N/A
Event filter	Persistent in People + Live Ops	"My events" on Home
Status chips	pending / approved / rejected	Same on status page
Empty states	Actionable CTA	"No shifts — register"
Broadcasts	Admin flash bar	staff_broadcast banner
Date format	Irish (DD/MM/YYYY)	Same

14. Design Principles

1. **Ops-first, finance-second** — Daily users live in Operations + People
2. **Event context is king** — Global event selector in admin header
3. **Mobile-native staff, desktop-native admin**
4. **One badge per channel** — Unified inbox badge only
5. **Progressive disclosure** — System/CMS hidden until needed
6. **Keep premium sidebar** — Regroup items into 6 modules, don't redesign chrome

15. Implementation Roadmap (UX)

Phase	Focus	Outcome
P1 — Nav regroup	Sidebar regroup + Finance sub-nav	Immediate clarity, no new routes
P2 — Unified Inbox	Merge admin notifications + messages	Single badge, single habit
P3 — Event Detail hub	Tab shell over existing event pages	Event-scoped ops
P4 — Staff Home	Replace tile grid for signed-in users	Personalized shift view
P5 — Command Center v2	Role-adaptive dashboard zones	Right CTA per role per day
P6 — Live Ops mode	Event-day fullscreen scan entry	Venue operator speed

Screen count summary (target state)

Surface	Current	Target primary	Change
Admin nav-visible	22	18	−18%
Admin total reachable	109	~45 screens (+ actions)	−59% perceived
Staff PWA primary	7 tiles	3 tabs + 4 drill-downs	Clearer hierarchy
Public marketing	7	7	Unchanged
Registration	2	1 funnel	Simplified

Companion document: See [docs/ADMIN-PAGE-INVENTORY.pdf](#) for the complete file-by-file inventory of all 109 admin PHP pages, database tables, roles, and criticality ratings.

Part H – Admin Page Inventory – 109 PHP pages

Event Staff System — Complete Admin Page Inventory

Base URL: <https://admin.olasentra.com/admin/> | Generated: 6 June 2026 | Total files: 109 PHP pages in /admin/

Roles

Administrator — full access (*)

Manager — dashboard, staff, events, attendance, invoices, export, audit, apply

Staff — dashboard, attendance only

Public — login/logout/index (unauthenticated)

Frequency: High = daily/event-day Medium = weekly Low = occasional

Criticality: **Critical** = operations stop without it Important = business impact Optional = nice-to-have

- 1. Dashboard (4)
- 2. Staff (14)
- 3. Events (19)
- 4. Attendance (6)
- 5. Messaging (2)
- 6. Payroll (2)
- 7. Invoicing (17)
- 8. Finance (7)
- 9. Reports (5)
- 10. CMS (11)
- 11. Settings (14)
- 12. Security (6)
- 13. Utilities (4)

1. Dashboard

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
dashboard.php	/admin/dashboard.php	Home → Dashboard	Operations hub: stats, pending queue, events, messages	Admin, Manager, Staff	staff_registrations, staff, events, attendance, staff_messages	High	Critical
notifications.php	/admin/notifications.php	Home → Notifications	Admin in-app notification inbox	Admin, Manager, Staff	app_notifications	Medium	Important
ops-checklist.php	/admin/ops-checklist.php	System → Ops checklist	Pre-event operational checklist	Admin, Manager, Staff	system_settings	Medium	Important
ops-checklist-action.php	/admin/ops-checklist-action.php	— POST	Save checklist state	Admin, Manager, Staff	system_settings	Low	Important

2. Staff

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
staff.php	/admin/staff.php	People → Staff queue	Registration queue filtered by event/status	Admin, Manager	staff_registrations, events, staff	High	Critical
staff-directory.php	/admin/staff-directory.php	People → Directory	Master staff profiles (PSA, bank, contact)	Admin, Manager	staff, staff_registrations	High	Critical
blacklist.php	/admin/blacklist.php	People → Blacklist	Blocked staff emails	Admin, Manager	staff_blacklist, staff	Low	Important
view-staff.php	/admin/view-staff.php?id=	— drill-down	Single registration detail	Admin, Manager	staff_registrations, attendance	High	Critical
staff-edit.php	/admin/staff-edit.php?id=	— from view	Edit registration/staff fields	Admin, Manager	staff_registrations, staff	High	Critical
update-status.php	/admin/update-status.php	— POST	Approve/reject; sends emails	Admin, Manager	staff_registrations, app_notifications	High	Critical

bulk-status.php	/admin/bulk-status.php	— POST	Bulk approve/reject	Admin, Manager	staff_registrations	Medium	Critical
bulk_status.php	/admin/bulk_status.php	— alias	Legacy redirect to bulk-status	Admin, Manager	—	Low	—
staff-delete.php	/admin/staff-delete.php	— POST	Delete registration	Admin, Manager	staff_registrations	Low	Important
staff-send-profile-link.php	/admin/staff-send-profile-link.php	— action	Email profile update link	Admin, Manager	staff, system_settings	Medium	Important
staff-regenerate-token.php	/admin/staff-regenerate-token.php	— action	Regenerate status/check-in tokens	Admin, Manager	staff_registrations	Low	Optional
staff-message.php	/admin/staff-message.php	— action	Send message to staff	Admin, Manager	staff_messages, staff	Medium	Important
blacklist-action.php	/admin/blacklist-action.php	— POST	Add/remove blacklist	Admin, Manager	staff_blacklist, staff	Low	Important
import-roster.php	/admin/import-roster.php	— utility	Import roster into registrations	Admin, Manager	staff_registrations, events	Low	Optional

3. Events

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
events.php	/admin/events.php	Events → Events	List and manage events	Admin, Manager	events	High	Critical
event-form.php	/admin/event-form.php	— from Events	Create/edit event	Admin, Manager	events, venues	High	Critical
save-event.php	/admin/save-event.php	— POST	Save event; may notify staff	Admin, Manager	events, app_notifications	High	Critical
toggle-event.php	/admin/toggle-event.php	— POST	Activate/deactivate event	Admin, Manager	events, app_notifications	Medium	Critical
venues.php	/admin/venues.php	Events → Venues	Venue directory	Admin, Manager	venues	Medium	Important
venue-form.php	/admin/venue-form.php	— from Venues	Edit venue	Admin, Manager	venues	Medium	Important
save-venue.php	/admin/save-venue.php	— POST	Save venue	Admin, Manager	venues	Medium	Important
venue-action.php	/admin/venue-action.php	— POST	Delete/toggle venue	Admin, Manager	venues	Low	Important
work-types.php	/admin/work-types.php	Events → Work types	Role type definitions	Admin, Manager	work_types	Low	Optional
work-type-form.php	/admin/work-type-form.php	— form	Edit work type	Admin, Manager	work_types	Low	Optional
save-work-type.php	/admin/save-work-type.php	— POST	Save work type	Admin, Manager	work_types	Low	Optional
work-type-action.php	/admin/work-type-action.php	— POST	Delete work type	Admin, Manager	work_types	Low	Optional
events-sheets-action.php	/admin/events-sheets-action.php	— POST	Google Sheets link/create	Admin, Manager	events, system_settings	Medium	Important
events-roster-action.php	/admin/events-roster-action.php	— POST	Roster sync actions	Admin, Manager	staff_registrations, events	Medium	Important
event-sign-qr.php	/admin/event-sign-qr.php	— utility	Event sign-in QR	Admin, Manager	events	Medium	Important
qr.php	/admin/qr.php	— utility	QR generator	Admin, Manager	events	Low	Optional
print-qr.php	/admin/print-qr.php	— print	Printable check-in QR	Admin, Manager	events, staff_registrations	Low	Optional

print-roster.php	/admin/print-roster.php	— print	Printable approved roster	Admin, Manager	staff_registrations, events	Medium	Important
roster-diagnostic.php	/admin/roster-diagnostic.php	— diagnostic	Debug registration counts	Admin, Manager	staff_registrations, events	Low	Optional

4. Attendance

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
attendance.php	/admin/attendance.php	Events → Attendance	Check-in log and filters	Admin, Manager, Staff	attendance, staff_registrations, events	High	Critical
scan-checkin.php	/admin/scan-checkin.php	Events → Scan check-in	Camera QR scanner at venue	Admin, Manager, Staff	attendance, staff_registrations	High	Critical
scan-checkin-action.php	/admin/scan-checkin-action.php	— POST	Process QR check-in	Admin, Manager, Staff	attendance	High	Critical
checkin-action.php	/admin/checkin-action.php	— POST	Manual check-in	Admin, Manager, Staff	attendance	Medium	Important
work-hours.php	/admin/work-hours.php	Events → Work hours	Hours worked per shift	Admin, Manager, Staff	attendance, staff_registrations	Medium	Important
work-hours-action.php	/admin/work-hours-action.php	— POST	Save hour adjustments	Admin, Manager, Staff	attendance	Medium	Important

5. Messaging

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
staff-inbox.php	/admin/staff-inbox.php	Home → Messages	Staff message thread list	Admin, Manager	staff_messages, staff	High	Important
staff-inbox-thread.php	/admin/staff-inbox-thread.php	— thread view	Conversation + reply	Admin, Manager	staff_messages	High	Important

6. Payroll

Payroll runs on Apply subdomain (apply.olasentra.com/admin). Main admin only has the bridge.

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
apply-portal.php	/admin/apply-portal.php	Site → Apply admin	SSO bridge to Apply admin (payroll, PSA)	Admin, Manager	Apply DB (staff_master)	Low	Important
apply-sync-ping.php	/admin/apply-sync-ping.php	— background	Trigger staff sync to Apply	Admin (logged in)	staff, Apply staff_master	Low	Optional

7. Invoicing

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
invoices.php	/admin/invoices.php	Finance → Invoices	Commission invoice hub	Admin, Manager	commission_invoices, commission_invoice_lines	Medium	Important
invoice-form.php	/admin/invoice-form.php	— form	Full invoice editor	Admin, Manager	commission_invoices	Medium	Important
invoice-quick.php	/admin/invoice-quick.php	— utility	Quick invoice create	Admin, Manager	commission_invoices	Medium	Important
invoice-action.php	/admin/invoice-action.php	— POST	Save/delete invoice	Admin, Manager	commission_invoices	Medium	Important
invoice-import.php	/admin/invoice-import.php	— utility	Import invoices	Admin, Manager	commission_invoices	Low	Optional
invoice-import-action.php	/admin/invoice-import-action.php	— POST	Process import	Admin, Manager	commission_invoices	Low	Optional

invoice-import-template.php	/admin/invoice-import-template.php	— download	CSV template	Admin, Manager	—	Low	Optional
job-records.php	/admin/job-records.php	Invoices sub	Saved job records	Admin, Manager	saved_job_records	Low	Important
job-record-form.php	/admin/job-record-form.php	— form	Job record editor	Admin, Manager	saved_job_records	Low	Important
job-record-action.php	/admin/job-record-action.php	— POST	Save job record	Admin, Manager	saved_job_records	Low	Important
personal-invoices.php	/admin/personal-invoices.php	Invoices sub	Personal invoice list	Admin, Manager	personal_invoice_lines	Low	Optional
personal-invoice-form.php	/admin/personal-invoice-form.php	— form	Personal invoice editor	Admin, Manager	personal_invoice_lines	Low	Optional
personal-work-log-form.php	/admin/personal-work-log-form.php	— form	Work log lines	Admin, Manager	personal_invoice_lines, attendance	Low	Optional
print-invoice.php	/admin/print-invoice.php	— print	Print commission invoice	Admin, Manager	commission_invoices	Medium	Important
print-invoice-quick.php	/admin/print-invoice-quick.php	— print	Quick print invoice	Admin, Manager	commission_invoices	Low	Important
print-invoices-month.php	/admin/print-invoices-month.php	— print	Monthly batch print	Admin, Manager	commission_invoices	Low	Optional
print-job-record.php	/admin/print-job-record.php	— print	Print job record	Admin, Manager	saved_job_records	Low	Optional

8. Finance (Exports)

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
export-staff.php	/admin/export-staff.php	Finance → Export	Export hub (staff, attendance, hours)	Admin, Manager	staff_registrations, staff, attendance	High	Important
export.php	/admin/export.php	— redirect	→ export-staff.php	Admin, Manager	—	Low	—
exports.php	/admin/exports.php	— redirect	→ export-staff.php	Admin, Manager	—	Low	—
export-attendance.php	/admin/export-attendance.php	— export	CSV check-ins	Admin, Manager	attendance	Medium	Important
export-work-hours.php	/admin/export-work-hours.php	— export	Export worked hours	Admin, Manager	attendance	Medium	Important
export-invoice.php	/admin/export-invoice.php	— export	Export single invoice	Admin, Manager	commission_invoices	Low	Important
export-invoices-month.php	/admin/export-invoices-month.php	— export	Monthly invoice export	Admin, Manager	commission_invoices	Low	Important

9. Reports & Diagnostics

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
audit-log.php	/admin/audit-log.php	System → Activity logs	Admin action audit trail	Admin, Manager	admin_audit_log	Low	Important
visitor-locations.php	/admin/visitor-locations.php	System → Visitors	Public site visitor geo map	Admin, Manager	website_visits	Low	Optional
geo-audits.php	/admin/geo-audits.php	System → Geo audits	Login geo + check-in locations	Admin, Manager	admin_audit_log, attendance	Low	Optional
roster-diagnostic.php	/admin/roster-diagnostic.php	— diagnostic	Registration count debug	Admin, Manager	staff_registrations	Low	Optional

google-sheets-diagnostic.php	/admin/google-sheets-diagnostic.php	Settings tab	Google Sheets connection test	Admin only	system_settings	Low	Important
------------------------------	-------------------------------------	--------------	-------------------------------	------------	-----------------	-----	-----------

10. CMS (Website & Forms)

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
forms.php	/admin/forms.php	Site → Forms	Registration form config	Admin only	system_settings	Medium	Important
form-new.php	/admin/form-new.php	— form	Create form slug	Admin only	system_settings	Low	Important
form-edit.php	/admin/form-edit.php	— form	Edit form fields	Admin only	system_settings	Medium	Important
website-global.php	/admin/website-global.php	System → Website CMS	Global CMS + settings	Admin only	system_settings	Medium	Important
website.php	/admin/website.php	— redirect	CMS tab router	Admin only	—	Low	—
website-home.php	/admin/website-home.php	— CMS tab	Homepage content	Admin only	system_settings	Low	Optional
website-events.php	/admin/website-events.php	— CMS tab	Events page content	Admin only	system_settings	Low	Optional
website-faq.php	/admin/website-faq.php	— CMS tab	FAQ content	Admin only	system_settings	Low	Optional
website-how.php	/admin/website-how.php	— CMS tab	How it works page	Admin only	system_settings	Low	Optional
website-contact.php	/admin/website-contact.php	— CMS tab	Contact page	Admin only	system_settings	Low	Optional
website-roles.php	/admin/website-roles.php	— CMS tab	Roles marketing page	Admin only	system_settings	Low	Optional

11. Settings

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
settings-site.php	/admin/settings-site.php	System → Settings	Company, URLs, site config	Admin only	system_settings	Medium	Critical
settings-production.php	/admin/settings-production.php	Settings tab	Google Sheets, integrations	Admin only	system_settings	Medium	Critical
settings-email.php	/admin/settings-email.php	Settings tab	SMTP and mail alerts	Admin only	system_settings	Medium	Critical
settings-theme.php	/admin/settings-theme.php	Settings tab	Brand colours and UI	Admin only	system_settings	Low	Optional
settings-account.php	/admin/settings-account.php	Footer → Profile	Change own password	All roles	admin_users	Medium	Critical
settings-security.php	/admin/settings-security.php	Settings tab	Security policies	Admin only	system_settings, admin_users	Medium	Critical
settings.php	/admin/settings.php	— redirect	→ settings-site.php	Admin only	—	Low	—
go-live.php	/admin/go-live.php	System → Go live	Production readiness wizard	Admin only	system_settings	Low	Important
go-live-action.php	/admin/go-live-action.php	— POST	Execute go-live steps	Admin only	system_settings	Low	Important
backups.php	/admin/backups.php	Settings linked	Backup list and create	Admin only	storage/backups	Low	Critical
backup-run.php	/admin/backup-run.php	— POST	Run backup job	Admin only	storage/backups	Low	Critical
backup-download.php	/admin/backup-download.php	— download	Download backup ZIP	Admin only	storage/backups	Low	Important

backups-export.php	/admin/backups-export.php	— export	Export backup bundle	Admin only	storage/backups	Low	Optional
system-cleanup.php	/admin/system-cleanup.php	— utility	Purge old data	Admin only	multiple	Low	Optional

12. Security

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
users.php	/admin/users.php	System → Team users	Admin account management	Admin only	admin_users	Low	Critical
user-action.php	/admin/user-action.php	— POST	Create/edit/deactivate users	Admin only	admin_users	Low	Critical
settings-security.php	/admin/settings-security.php	Settings tab	Security configuration	Admin only	system_settings	Medium	Critical
blacklist.php	/admin/blacklist.php	People → Blacklist	Block staff registrations	Admin, Manager	staff_blacklist	Low	Important
geo-audits.php	/admin/geo-audits.php	System → Geo audits	Login location monitoring	Admin, Manager	admin_audit_log	Low	Optional
audit-log.php	/admin/audit-log.php	System → Activity logs	Change history	Admin, Manager	admin_audit_log	Low	Important

13. Utilities

File	URL	Menu	Purpose	Roles	Tables	Freq	Crit
index.php	/admin/index.php	—	Router → dashboard or login	Public / All	—	High	Critical
login.php	/admin/login.php	—	Admin authentication	Public	admin_users	High	Critical
logout.php	/admin/logout.php	Footer → Logout	End session	All	session	High	Critical
google-drive-oauth-callback.php	/admin/google-drive-oauth-callback.php	— OAuth	Google Drive OAuth return	Admin	system_settings	Low	Important

Summary & Reference

Metric	Value	Sidebar menu pages	URL
Total PHP files	109	Dashboard	dashboard.php
Sidebar menu items	22	Notifications	notifications.php
Critical pages	18	Messages	staff-inbox.php
Admin-only pages	28	Staff queue	staff.php
Action/POST handlers	~35	Directory	staff-directory.php
		Blacklist	blacklist.php
		Events	events.php
		Venues	venues.php
		Work types	work-types.php
		Attendance	attendance.php
		Work hours	work-hours.php
		Scan check-in	scan-checkin.php
		Invoices	invoices.php

Core tables: staff_registrations, staff, events, venues, attendance, staff_messages, app_notifications, commission_invoices, commission_invoice_lines, saved_job_records, personal_invoice_lines, system_settings, admin_users, admin_audit_log, staff_blacklist, work_types, website_visits

Event Staff System — Olasentra — Confidential internal documentation

Olasentra Event Staff System — Production Audit Report

Date: 2026-06-06 | Scope: olasentra.com ecosystem | Stack: Custom PHP 8.x + MySQL

Executive Summary

Live production is **operational**: health API reports DB/storage OK; Nick Cave event shows 36 registrations (35 approved). Critical staff-list bug (empty "All roles" filtering to DSP only) was fixed.

This audit applied safe hardening without removing business functionality. High-priority items remain: apply admin CSRF, registrant API rate limits, migration pipeline.

A. Critical Issues

#	Issue	Status
1	Staff list "All roles" silently filtered staff_role=dsp	Fixed
2	Unauthenticated DB diagnostic database/tmp-venue-check.php	Quarantined + blocked
3	Dev scripts under /scripts/ web-accessible	Blocked + quarantined
4	api/registrant-lookup.php returns PII by email only	Open — add rate limit
5	apply/admin/update-details.php weak upload validation	Open
6	Apply admin has no CSRF on POST forms	Open

B. Bugs Fixed

- Role filter bug — normalizeStaffRole("") returned dsp
- Staff pagination — 50/page, per-page selector
- Diagnostic exposure — quarantined to storage/quarantine/2026-06-06-audit/
- Apache hardening — deny database/, scripts/, vendor/
- Upload directory — uploads/.htaccess blocks script execution
- roster-check API — diagnostics hidden on production

C. Security Issues

Fixed / mitigated

- Root .htaccess blocks includes/, storage/, database/, scripts/, vendor/
- config.php denied via FilesMatch
- Main admin: CSRF, login logout, capability-based auth
- PDO prepared statements; EMULATE_PREPARES false in production

Remaining (prioritized)

Priority	Item
HIGH	Add CSRF tokens to apply admin
HIGH	Harden apply/admin/update-details.php uploads
HIGH	Set explicit APPLY_SSO_SECRET / cron keys
HIGH	Rate-limit api/registrant-lookup.php
MEDIUM	Apply admin: initSecureSession()
MEDIUM	Convert GET state changes to POST+CSRF
LOW	Remove import-summer-roster.php after import

D. Performance Issues

Item	Recommendation
Staff list grouped queries	Fixed JOIN removal in count query
Missing composite indexes	Add (event_id, status) on staff_registrations
LOWER(email) in WHERE	Normalize emails at insert
Runtime ensure*Schema()	Consolidate migrations 35–47

E. Database Issues

Healthy

- FK staff_registrations.event_id → events
- UNIQUE (email, event_id)
- Production: 36 registrations event #1 Nick Cave (35 approved)

Recommendations

1. Extend getDatabaseMigrationFiles() to phases 35–47
2. Add FKs: staff_messages.staff_id, personal_invoice_lines, saved_job_records.event_id
3. Backfill NULL staff_registrations.staff_id
4. Periodic reconciliation: staff vs latest registration per email

F. Files Safe to Remove (after review)

Path	Notes
storage/backups/pre-deploy-*.zip (keep latest 3)	Deploy artifacts
import-summer-roster.php	After roster import
database/seed-*.php, database/tmp-*	Dev only

G. Files Requiring Review

Path	Reason
api/registant-lookup.php	PII in JSON response
apply/admin/update-details.php	Public profile + uploads
cron/daily-cleanup.php	Web-accessible with key
admin/import-roster.php	GET-triggered import

H. Changes Made (2026-06-06)

File	Change
.htaccess	Block database/scripts/vendor; HTTPS redirect
database/.htaccess, scripts/.htaccess	Deny all web access
uploads/.htaccess	Block script execution
api/roster-check.php	Hide verbose diagnostics in production
includes/staff-repository.php	Role filter fix
admin/staff.php	Pagination + event flat list

I. Remaining Recommendations

Immediate

1. Run Admin → Backups → Full backup on production
2. Confirm APP_ENV=production in server config.php
3. Set apply SSO/cron secrets in sso.local.php
4. Add composite index (event_id, status)

Short term (1–2 weeks)

1. CSRF middleware for apply admin
2. Rate limit registrant lookup (10 req/min/IP)
3. Complete migration runner phases 35–47

J. Final Verification Checklist

Test	Expected
Admin login	admin.olasentra.com/login.php
Staff list event filter	36 rows for Nick Cave, all roles
Registration form	register.olasentra.com
Health API	JSON ok
Blocked paths	/database/setup.php → 403/404
